# **Project Information**

Project Name

CSAH 19 (Shadywood Road) over Narrows Channel Bridge

(No. 27516) Rehabilitation

Primary County where the Project is Located Hennepin

Jurisdictional Agency (If Different than the Applicant):

The project includes the rehabilitation of the CSAH 19 (Shadywood Road) bridge (No. 27516) located over the Narrows Channel of Lake Minnetonka. This bridge is on the border between the cities of Orono and Tonka Bay. CSAH 19 is an A-Minor Arterial roadway that currently carries 11,900 vehicles per day. This section of CSAH 19 is a vital corridor for all modes of traffic through the Lake Minnetonka area. The roadway extends north from TH 7 in the southern part of Hennepin County for approximately 24 miles into Wright County. This section is a heavily used bike route and provides a popular recreational/fishing area directly under the bridge. Bridge rehabilitation is needed to deliver safe and efficient transportation service to its users.

Existing Conditions:

Brief Project Description (Limit 2,800 characters; approximately 400 words)

The CSAH 19 bridge is classified as structurally deficient with a sufficiency rating of 54. The bridge is experiencing significant deterioration of the north abutment, including distortion and stress cracking. The abutment wall has separated from its originally constructed position and is resting on the adjacent bridge deck. Soil beneath the approach panel has filled the void created by this movement and may be causing further damage to the wall. The paving block appears to be pulling away from the end of the approach panel resulting in a void between it and the approach panel. Water that is leaking through the bridge deck is resulting in rapid deterioration of the uncoated reinforcement, steel beam ends, bearings, and abutment seat. In addition, there is no available space for thermal expansion to occur at either end of the bridge since the expansion joints are completely closed. Fluctuating temperatures result in a thermally induced axial load on the superstructure that was not originally accounted for in the design.

#### **Project Improvements:**

The project includes rehabilitation of this deteriorated bridge with improvements to the bridge deck, approach panel, abutment wall, joints, bridge beams and bearing assemblies. The improvements are needed as soon as possible to avoid failure of the abutment. The rehabilitation will include replacing the approach panels and north abutment parapet, replacing both expansion joints and the concrete deck, and sand blasting and repainting the beams and bearing assemblies.

The current bridge cross section is 52 feet, which includes two 12-foot driving lanes and two 14-foot shoulders. This cross section will remain intact with the proposed rehabilitation. The bridge would be designed for a 75-year or greater service life.

Include location, road name/functional class, type of improvement, etc.

<u>TIP Description Guidance</u> (will be used in TIP if the project is selected for funding)

**Project Length (Miles)** 

CSAH 19 OVER NARROWS CHANNEL - REHAB BR. 27516

0.12

#### **Project Funding**

Are you applying for funds from another source(s) to implement this project?

No

If yes, please identify the source(s)

Federal Amount \$1,520,000.00

Match Amount \$380,000.00

Minimum of 20% of project total

Project Total \$1,900,000.00

Match Percentage 20.0%

Minimum of 20%

Compute the match percentage by dividing the match amount by the project total

Source of Match Funds Hennepin County and State

A minimum of 20% of the total project cost must come from non-federal sources; additional match funds over the 20% minimum can come from other federal sources

**Preferred Program Year** 

Select one: 2021

For TDM projects, select 2018 or 2019. For Roadway, Transit, or Trail/Pedestrian projects, select 2020 or 2021.

**Additional Program Years:** 

Select all years that are feasible if funding in an earlier year becomes available.

# **Requirements - All Projects**

#### **All Projects**

<sup>1.</sup> The project must be consistent with the goals and policies in these adopted regional plans: Thrive MSP 2040 (2014), the 2040 Transportation Policy Plan, the 2040 Regional Parks Policy Plan (2015), and the 2040 Water Resources Policy Plan (2015).

#### Check the box to indicate that the project meets this requirement. Yes

2. The project must be consistent with the 2040 Transportation Policy Plan. Reference the 2040 Transportation Plan objectives and strategies that relate to the project.

The CSAH 19 bridge rehabilitation project is consistent with the 2040 Transportation Policy Plan by meeting the following objectives and strategies:

- A) Transportation System Stewardship: Through Hennepin County's annual bridge inspection program we ensure planned preservation and maintenance of our facilities. This project will rehabilitate a structurally deficient bridge that currently carries 11,900 vehicles per day.
- B) Safety and Security: The rehabilitated bridge will provide a safer design to serve its users, and will retain the current cross section, with two 12-foot travel lanes and two 14-foot shoulders to accommodate dedicated buffered bicycle lanes on the bridge. The bridge rehabilitation will also solve the structural safety issues for this deficient bridge.
- List the goals, objectives, strategies, and associated pages:
- C) Access to Destinations: CSAH 19 is a regional corridor that extends approximately 24 miles from TH 7 in southern Hennepin County into Wright County, providing access for visitors to the Lake Minnetonka area and multiple regional trails. The bridge rehabilitation will continue to provide efficient access to key destinations in the area. This bridge also supports local transit Express Route 671.
- D) Competitive Economy: CSAH 19 provides a vital connection for residents and visitors to access jobs, education, and recreational destinations.
- E) Healthy Environment: The rehabilitated bridge will provide dedicated buffered bicycle lanes to support multi-modal traffic, which will provide an alternative local transportation connection bridging mature, walkable neighborhoods. The rehabilitated bridge will also benefit pedestrians and bicyclists on the bridge by providing a smoother pavement

surface.

F) Leveraging Transportation Investments to Guide Land Use: Due to land constraints, development will be largely limited to subdivision and redevelopment. There is an imminent need to preserve and enhance the existing infrastructure to support transportation and land use in the area.

3. The project or the transportation problem/need that the project addresses must be in a local planning or programming document. Reference the name of the appropriate comprehensive plan, regional/statewide plan, capital improvement program, corridor study document [studies on trunk highway must be approved by the Minnesota Department of Transportation and the Metropolitan Council], or other official plan or program of the applicant agency [includes Safe Routes to School Plans] that the project is included in and/or a transportation problem/need that the project addresses.

Top 20 Hennepin County Bridge Priority Ranking

MnDOT Bridge Inspection Report (pages attached)

List the applicable documents and pages:

MnDOT Structure Inventory Report(pages attached)

4. The project must exclude costs for studies, preliminary engineering, design, or construction engineering. Right-of-way costs are only eligible as part of bicycle/pedestrian projects, transit stations/stops, transit terminals, park-and-ride facilities, or pool-and-ride lots. Noise barriers, drainage projects, fences, landscaping, etc., are not eligible for funding as a standalone project, but can be included as part of the larger submitted project, which is otherwise eligible.

Check the box to indicate that the project meets this requirement. Yes

5.Applicants that are not cities or counties in the seven-county metro area with populations over 5,000 must contact the MnDOT Metro State Aid Office prior to submitting their application to determine if a public agency sponsor is required.

Check the box to indicate that the project meets this requirement. Yes

6.Applicants must not submit an application for the same project elements in more than one funding application category.

Check the box to indicate that the project meets this requirement. Yes

7.The requested funding amount must be more than or equal to the minimum award and less than or equal to the maximum award. The cost of preparing a project for funding authorization can be substantial. For that reason, minimum federal amounts apply. Other federal funds may be combined with the requested funds for projects exceeding the maximum award, but the source(s) must be identified in the application. Funding amounts by application category are listed below.

Roadway Expansion: \$1,000,000 to \$7,000,000

Roadway Reconstruction/ Modernization: \$1,000,000 to \$7,000,000

Roadway System Management \$250,000 to \$7,000,000

Bridges Rehabilitation/ Replacement: \$1,000,000 to \$7,000,000

Check the box to indicate that the project meets this requirement. Yes

8. The project must comply with the Americans with Disabilities Act.

Check the box to indicate that the project meets this requirement. Yes

9. The project must be accessible and open to the general public.

#### Check the box to indicate that the project meets this requirement. Yes

10. The owner/operator of the facility must operate and maintain the project for the useful life of the improvement.

#### Check the box to indicate that the project meets this requirement. Yes

11. The project must represent a permanent improvement with independent utility. The term independent utility means the project provides benefits described in the application by itself and does not depend on any construction elements of the project being funded from other sources outside the regional solicitation, excluding the required non-federal match. Projects that include traffic management or transit operating funds as part of a construction project are exempt from this policy.

#### Check the box to indicate that the project meets this requirement. Yes

12. The project must not be a temporary construction project. A temporary construction project is defined as work that must be replaced within five years and is ineligible for funding. The project must also not be staged construction where the project will be replaced as part of future stages. Staged construction is eligible for funding as long as future stages build on, rather than replace, previous work.

#### Check the box to indicate that the project meets this requirement. Yes

13. The project applicant must send written notification regarding the proposed project to all affected state and local units of government prior to submitting the application.

Check the box to indicate that the project meets this requirement. Yes

#### **Roadways Including Multimodal Elements**

1.All roadway and bridge projects must be identified as a Principal Arterial (Non-Freeway facilities only) or A-Minor Arterial as shown on the latest TAB approved roadway functional classification map.

Check the box to indicate that the project meets this requirement. Yes

#### Roadway Expansion and Reconstruction/Modernization projects only:

2. The project must be designed to meet 10-ton load limit standards.

Check the box to indicate that the project meets this requirement. Yes

#### Bridge Rehabilitation/Replacement projects only:

3.Projects requiring a grade-separated crossing of a Principal Arterial freeway must be limited to the federal share of those project costs identified as local (non-MnDOT) cost responsibility using MnDOTs Cost Participation for Cooperative Construction Projects and Maintenance Responsibilities manual. In the case of a federally funded trunk highway project, the policy guidelines should be read as if the funded trunk highway route is under local jurisdiction.

#### Check the box to indicate that the project meets this requirement. Yes

4. The bridge must carry vehicular traffic. Bridges can carry traffic from multiple modes. However, bridges that <u>are exclusively</u> for bicycle or pedestrian traffic must apply under one of the Bicycle and Pedestrian Facilities application categories. Rail-only bridges are ineligible for funding.

#### Check the box to indicate that the project meets this requirement. Yes

5. The length of the bridge must equal or exceed 20 feet.

#### Check the box to indicate that the project meets this requirement. Yes

6. The bridge must have a sufficiency rating less than 80 for rehabilitation projects and less than 50 for replacement projects. Additionally, the bridge must also be classified as structurally deficient or functionally obsolete.

Check the box to indicate that the project meets this requirement. Yes

# Measure C: Current Daily Heavy Commercial Traffic

Location CSAH 19 bridge, south of Lafayette Road

Current Daily Heavy Commercial Traffic Volume 2066.0

Date Heavy Commercial Count Taken: 05/19/2016

#### **Measure D: Freight Elements**

The CSAH 19 bridge over the Narrows Channel is a regionally significant freight route for Lake Minnetonka communities carrying 2,066 heavy commercial vehicles daily. CSAH 19 extends approximately 24 miles north from TH 7 in southern Hennepin County into Wright County. Traffic trends show increased freight and delivery trucks along this corridor and others in the region.

Response (Limit 1,400 characters; approximately 200 words)

The bridge is classified as structurally deficient with a 54 sufficiency rating. The rehabilitation will include significant safety improvements to continue to serve heavy commercial vehicles with timesensitive freight. The rehabilitation of this bridge will avoid potential load restrictions and rerouting of heavy vehicles. A detour from this connection would result in rerouting of truck traffic over 15 miles due to the limited routes around Lake Minnetonka accessible to heavy trucks.

As freight needs continue to increase, this project will improve mobility, safety and operations for truck traffic. The bridge rehabilitation will support economic development by providing efficient access to key destinations in the area. The project will preserve the existing cross section of 52 feet, with two 12-foot lanes and two 14-foot shoulders. It's anticipated the bridge would remain open to traffic throughout construction, thus avoiding lengthy detours. The bridge would be designed for a 75-year or greater service life.

# Measure A: Project Location and Impact to Disadvantaged Populations

#### Select one:

Project located in Area of Concentrated Poverty with 50% or more of residents are people of color (ACP50):

**Project located in Area of Concentrated Poverty:** 

Projects census tracts are above the regional average for population in poverty or population of color:

Project located in a census tract that is below the regional average for population in poverty or populations of color or includes children, people with disabilities, or the elderly:

Yes

This bridge is located between the cities of Orono and Tonka Bay, which is identified as a census track that is below the regional average for population in poverty or populations of color. The project is in an area that includes children, people with disabilities and the elderly; although not in concentrations recognized by the Metropolitan Council.

The CSAH 19 bridge connects residents (inclusive of all races, ethnicity, incomes, and abilities) to jobs and educational opportunities. This section of CSAH 19 is a heavily used bike route and provides a popular recreational/fishing area directly under the bridge. The rehabilitation of the bridge will maintain a vital north-south link through the communities around Lake Minnetonka. This project will also allow for a very important bicycle link between the Dakota Rail Regional Trail and the Lake Minnetonka LRT Regional Trail. These regional trails create a non-motorized transportation option for populations who may not have access to a motor vehicle.

Response (Limit 2,800 characters; approximately 400 words)

The project will provide a benefit to all residents, including children and elderly that currently live in the area by increasing the safety of this bridge. This will allow all transportation modes with the freedom to use this facility for commuting, recreational or social purposes. The CSAH 19 bridge rehabilitation project will provide a safer bridge design by maintaining space on the bridge for all residents, including children and elderly, to walk or bike along this facility. The project will not negatively impact low-income populations, populations of color, or the elderly. All facilities will be upgraded to current ADA standards to improve access for people with disabilities.

#### **Measure A: Bridge Condition**

Bridge Sufficiency Rating 54.0

#### **Measure B: Project Improvements**

Load Posted (Check box if the bridge is load-posted):

## **Measure A: Multimodal Elements and Existing Connections**

The CSAH 19 bridge rehabilitation project will include the following multimodal elements:

- Buffered bicycle lanes
- Improved roadway surface

CSAH 19 provides a singular north/south connection across Lake Minnetonka between the Dakota Rail Regional Trail and the Lake Minnetonka Regional Trail. The corridor, which includes shoulders of varying width, is signed as a bike route and recognized as an existing on-street bikeway in the county bike plan. Designated pedestrian facilities are not provided except in commercial areas, the closest of which is approximately 0.75 miles north of the project area. In addition, CSAH 19 serves Express Route 671 with service between Excelsior and Downtown Minneapolis.

Response (Limit 2,800 characters; approximately 400 words)

The corridor is identified as a planned off-street bikeway and prioritized as a top 25 planned bikeway segment in the county bicycle plan. Prior to the county bike plan, Shorewood, Tonka Bay, Orono, and Hennepin County collaborated to develop a County Road 19 Trail Concept Design for the corridor between the Dakota Rail Regional Trail and Lake Minnetonka Regional Trail. The concept design sought opportunities to improve conditions for people walking and biking both for local and regional recreation and transportation purposes. While an off-street connection is consistently identified among plans and studies, trail alignment and timeline for implementation remain uncertain.

Given the opportunity but uncertainty of future

corridor improvements, the overall bridge width and planned bikeway will allow for flexibility in design down the road. Dedicated buffered bicycle lanes will improve existing conditions by better defining space and preserving a seamless transition between the bridge and bikeable shoulders while providing an opportunity to easily modify lanes in the future to align with trail and sidewalk improvements on the approaches. Additional vertical separation (flexible delineators, for example) may be considered later in the design process.

#### **Transit Projects Not Requiring Construction**

If the applicant is completing a transit or TDM application that is operations only, check the box and do not complete the remainder of the form. These projects will receive full points for the Risk Assessment.

Park-and-Ride and other transit construction projects require completion of the Risk Assessment below.

General \*Bridge 27516 CSAH 19 / Narrows Channel 6/12/15 JDE & PTH. 60' Snooper over E side only. Snooper on shoulder. Notes:

Recommended Repairs:

- 215. Repair abut seats. Repairing N abut parapet wall would be major repair-it is structurally adequate @ present. Hinged @ seat & supported @ deck-monitor for changes.
- 301. Repair poured joints.
- 320 & 407. Repair roadway spalls & large cracks @ ends of bridge.
- 407. Ramp S bit approach w/ bit
- 981. Replace signs: X4-5 @ SE, NE & NW.
- 982. Repair guardrail posts in SE & NW.
- 985. Fill gap & replace seal @ top of slope paving @ abuts.
- 988. Cut tree @ E end of N pier for snooper access.

General Notes: \*Bridge 27516 CSAH 19 / Narrows Channel 6/12/15 JDE & PTH. 60' Snooper over E side only. Snooper on shoulder.

#### Recommended Repairs:

215. Repair abut seats. Repairing N abut parapet wall would be major repair-it is structurally adequate @ present. Hinged @ seat & supported @ deck-monitor for changes.

301. Repair poured joints.

320 & 407. Repair roadway spalls & large cracks @ ends of bridge.

407. Ramp S bit approach w/ bit

981. Replace signs: X4-5 @ SE, NE & NW.

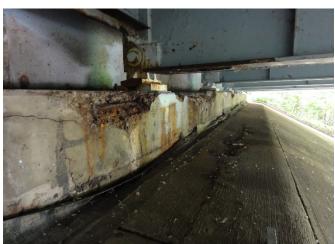

982. Repair guardrail posts in SE & NW.

985. Fill gap & replace seal @ top of slope paving @ abuts.

988. Cut tree @ E end of N pier for snooper access.

image006.png image008.png image010.png

Sierra,

Here is the data you requested. It is generated from the model runs from the most recent update of the Council's 2040 Transportation Policy Plan and is based in the four-step trip-based regional travel demand forecast model.

Project Forecast Volume

CSAH 15 (Shoreline Dr) Bridge Replacement 20,900
CSAH 19 (Manitou Rd/Shadywood Rd) Bridge Rehabilitation 16,200
CSAH 23 (Marshall St NE) 10,500

CSAH 32 (Penn Ave) Reconstruction 16,200 (Note: The 2014 AADT

you cite of 12,800 is actually outside

your project area. 10,800 is

the only AADT reported in your

project area)

CSAH 66 (Golden Valley Rd) Reconstruction 19,900 (West of Noble Ave.)

10,200 (East of Indiana Ave.)

CSAH 81 (Bottineau Blvd) Expansion 51,100 CSAH 81 (Broadway Ave) Bridge Replacement 24,700

CSAH 152 (Webber Pkwy) Reconstruction Th

This roadway is not in the regional model.

The model links in the area show an

annualized

growth rate of 0.5%. When applied

to the 13,700

2013 volume, this grows to 16,100.

If you have any questions, please feel free to contact me.

**Subject:** 2016 Regional Solicitation - Forecast AADT's

Greetings Mark,

I'm writing to request 2040 Forecast AADT information for the Regional Solicitation. Below is the list of projects with our most recent adjusted traffic counts. Project location maps are attached, in the same order as the list below:

- CSAH 15 (Shoreline Dr) Bridge Replacement (Over Browns Bay/Tanager Channel): 16,500
   (2014 AADT)
- CSAH 19 (Manitou Rd/Shadywood Rd) Bridge Rehabilitation (Over Narrows Channel): 11,900
   (2016 AADT)
- CSAH 23 (Marshall St NE) Reconstruction: **8,800** (2016 AADT)
- CSAH 32 (Penn Ave) Reconstruction: **12,800** (2014 AADT)
- CSAH 66 (Golden Valley Rd) Reconstruction: **11,900** (2016 AADT)
- CSAH 81 (Bottineau Blvd) Expansion (4-lane divided to 6-lane divided): **21,400** (2013 AADT)
- CSAH 81 (Broadway Ave) Bridge Replacement (Over CSAH 153 [Lowry Ave]): 12,100 (2016 AADT)
- CSAH 152 (Webber Pkwy) Reconstruction: **13,700** (2013 AADT)

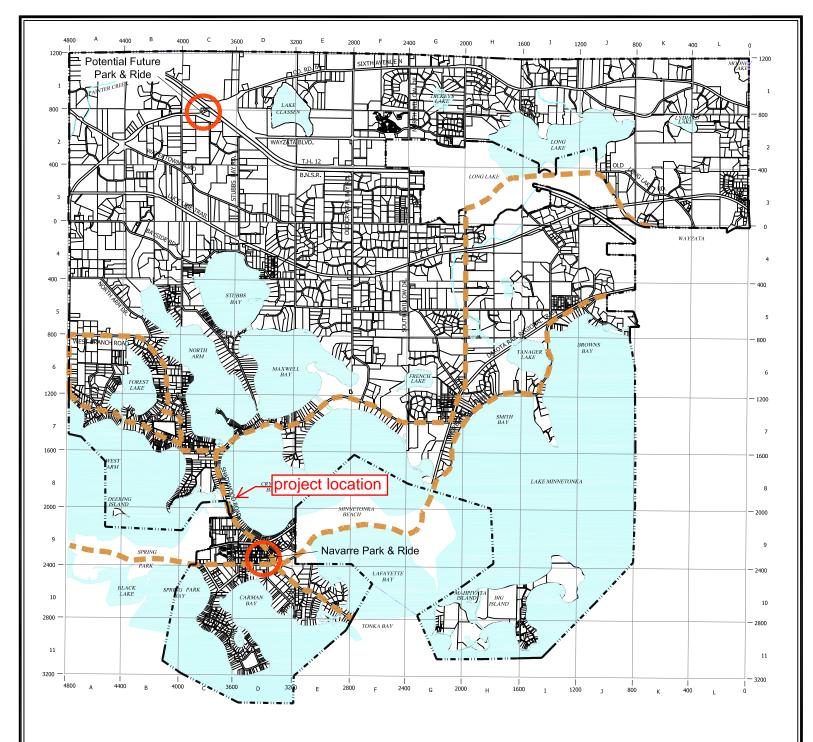

Please let me know if you need any additional information, and thank you!

### **Full Listing of Planned 2040 Bikeway System Segments**

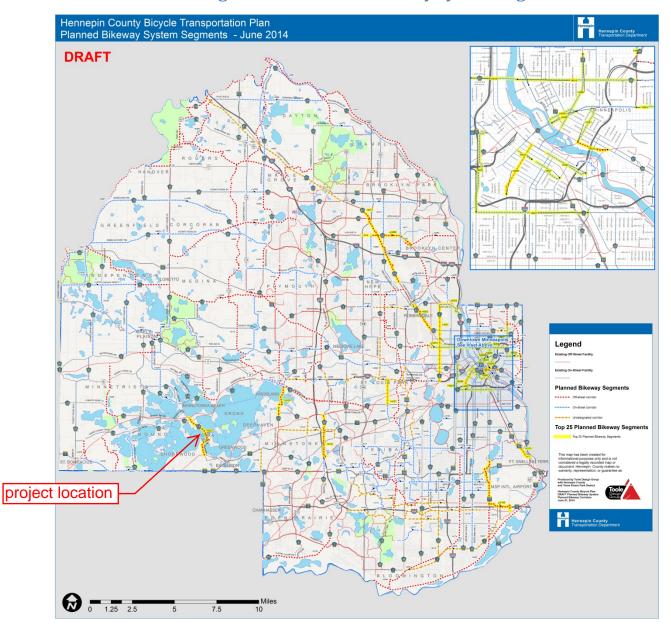

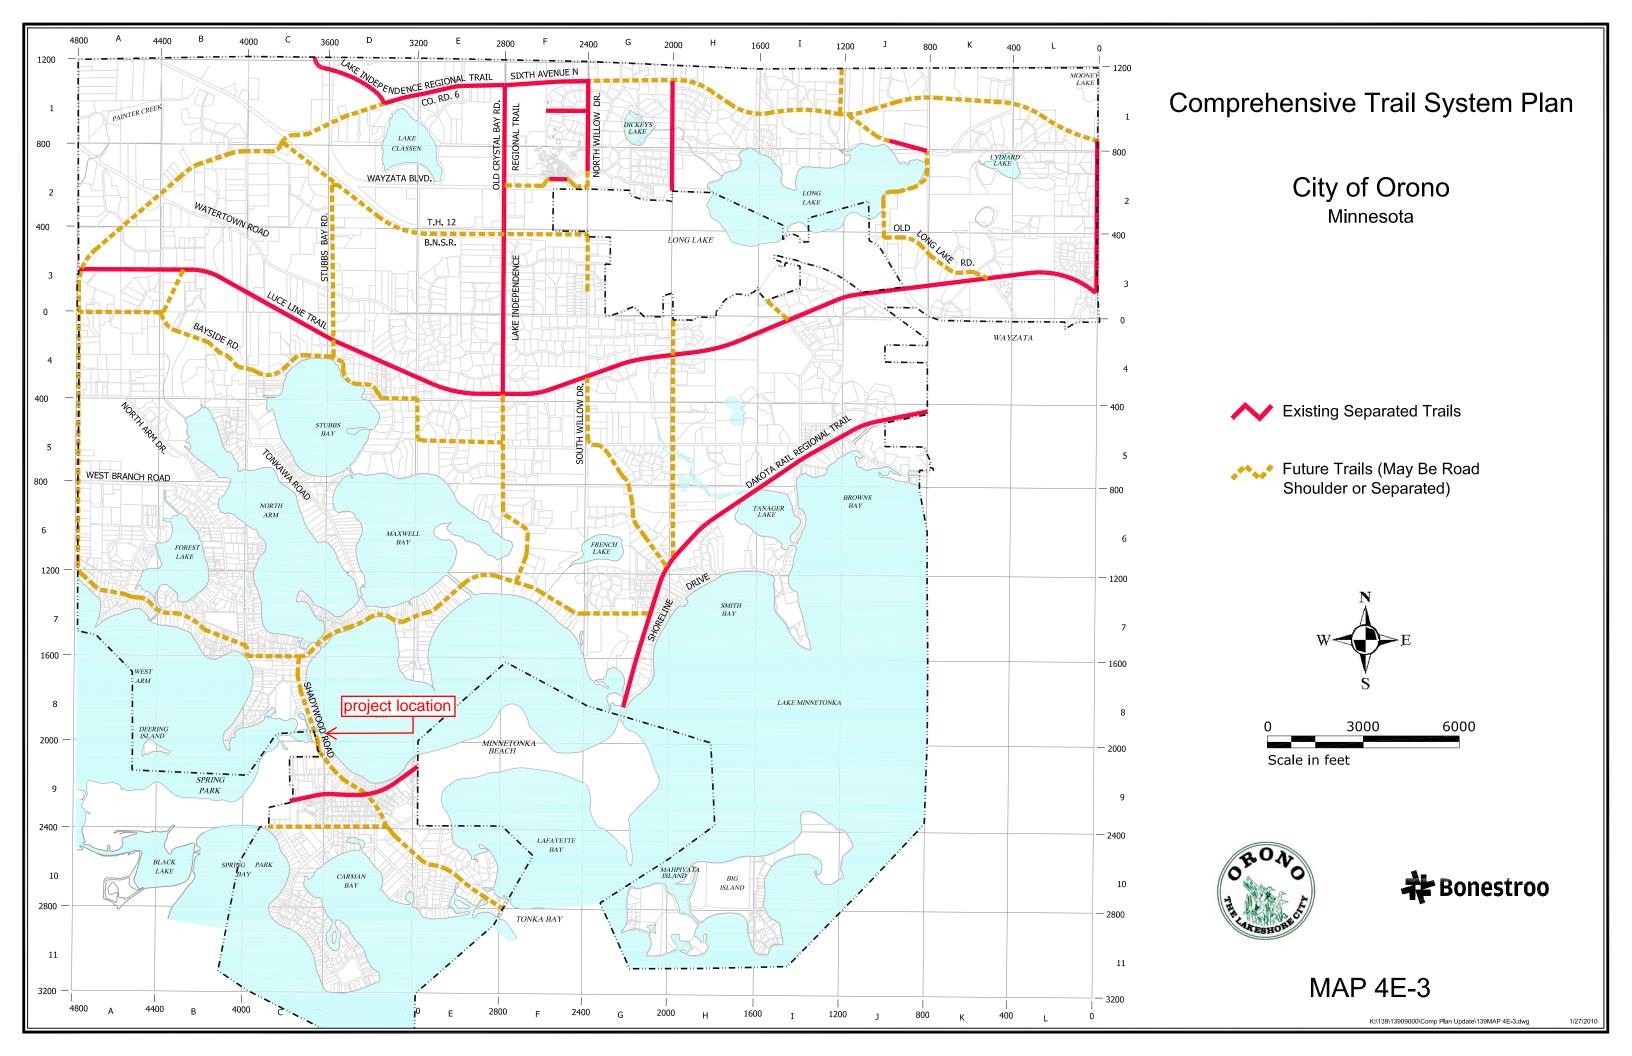

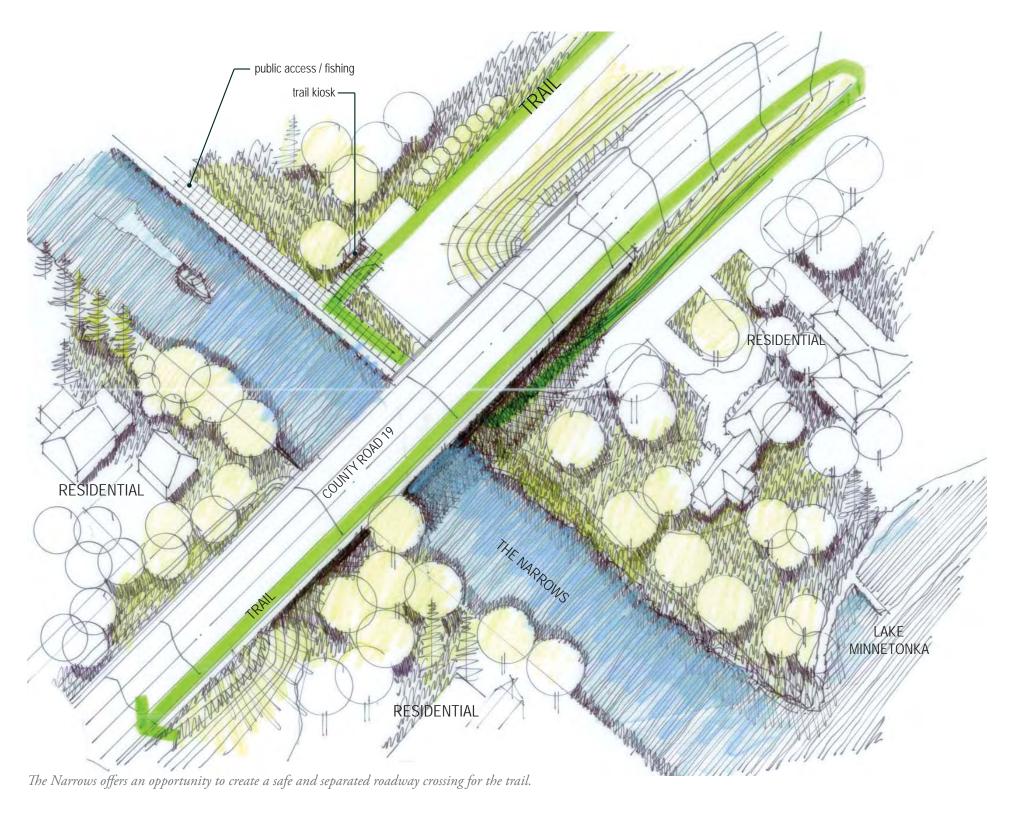

Figure 1 Planned 2040 Bikeway System Corridors Map

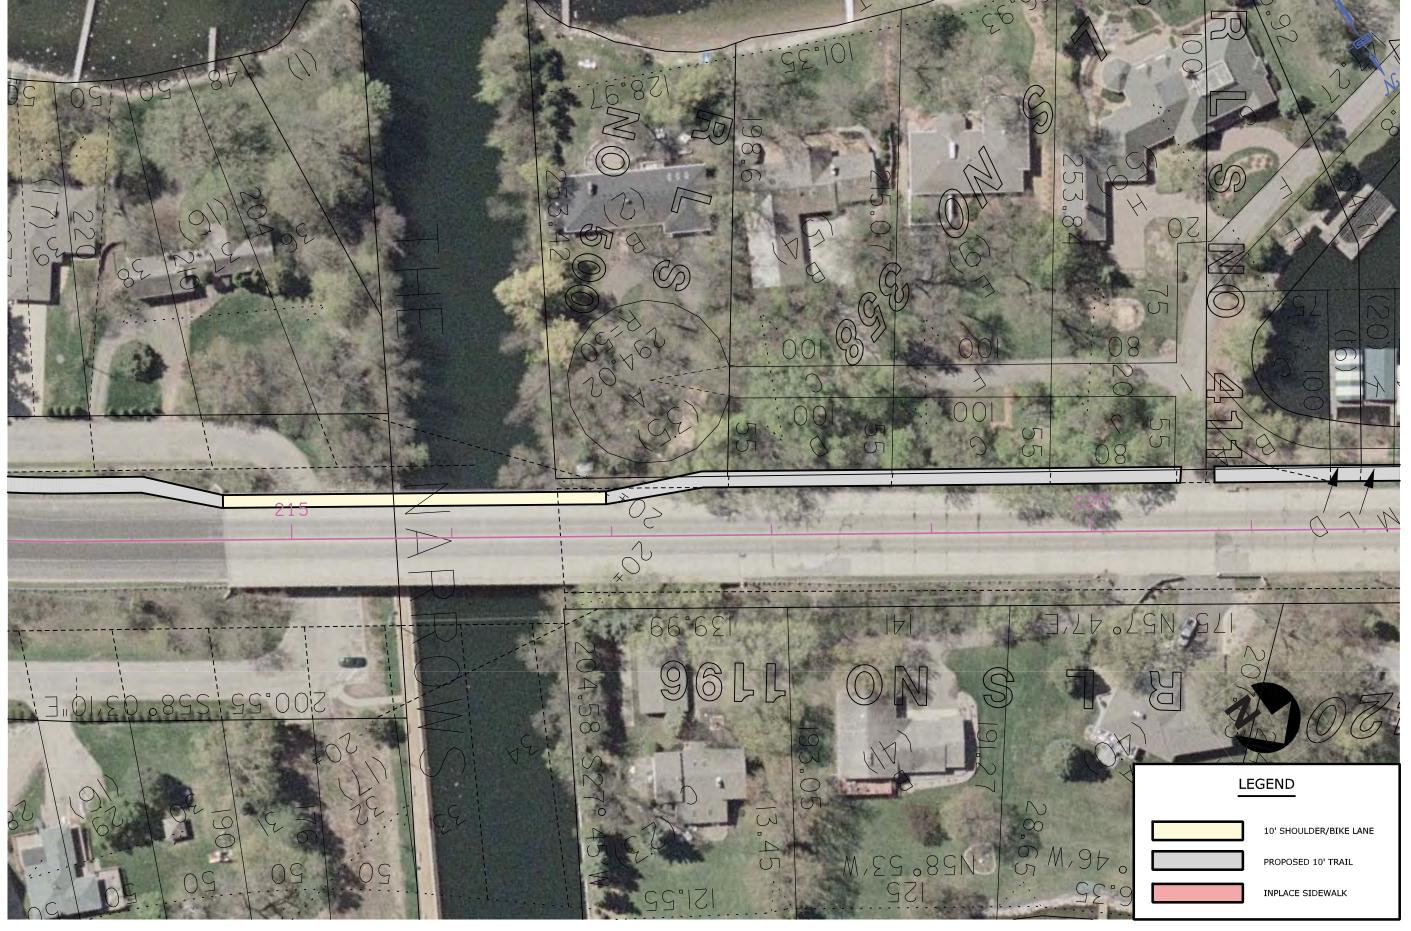

The Narrows is a landmark for Lake Minnetonka, and it falls at a point that allows for trail users to move from one side of the corridor to the other. While the concepts might rely on this area as a means of safely traversing the corridor, the route is sufficiently long that trail users may choose to avoid the looping movements that would otherwise help them avoid cars on County Road 19. The public realm of the loop should attract trail users, with signage and landscaping, so that they not only use the loop but can experience the Narrows.

Re: Support for Regional Solicitation Application

CSAH 19 (Shadywood Road) Bridge Rehabilitation over Narrows Channel

Dear Mr. Grube:

The City of Orono supports Hennepin County's federal funding application through the Regional Solicitation for the proposed rehabilitation of the CSAH 19 (Shadywood Road) bridge over the Narrows Channel.

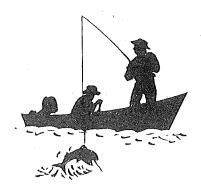

The city supports this county project to rehabilitate the existing bridge with improvements to the bridge deck, approach panel, abutment wall and joints, in addition to sand blasting and repainting the beams and bearing assemblies. These improvement will enhance the livability and quality of life for Orono and Hennepin County residents.

Thank you for making us aware of this application effort and the opportunity to provide support. The city looks forward to working with you on this project.

Sincerely,

Adam Edwards, P.E.

Director of Public Works/City Engineer

Re: Support for Regional Solicitation Application

CSAH 19 (Shadywood Road) Bridge Rehabilitation over the Narrows Channel

Dear Mr. Grube:

The City of Tonka Bay supports Hennepin County's federal funding application through the Regional Solicitation for the proposed rehabilitation of the CSAH 19 (Shadywood Road) bridge over the Narrows Channel.

The city supports this county project to rehabilitate the existing bridge with improvements to the bridge deck, approach panel, abutment wall and joints in addition to sand blasting and repainting the beams and bearing assemblies. These improvements will enhance the livability and quality of life for Tonka Bay and Hennepin County residents.

Thank you for making us aware of this application effort and the opportunity to provide our support. The city looks forward to working with you on this project.

Sincerely,

Lindy Crawford City Administrator
