Project Information

Project Name CSAH 153 (Lowry Ave NE/Kenzie Terr) Phase 3 Reconstruction Project

Primary County where the Project is Located Hennepin

Cities or Townships where the Project is Located: City of Minneapolis & City of St. Anthony

Jurisdictional Agency (If Different than the Applicant): N/A Brief Project Description (Include location, road name/functional class, The CSAH 153 (Lowry Ave NE/Kenzie Terr) Phase 3 Reconstruction Project type of improvement, etc.)

The CSAH 153 (Lowry Ave NE/Kenzie Terr) Phase 3 Reconstruction Project includes the reconstruction of the corridor from 150' E of Johnson St NE to 200' W of St. Anthony Blvd in the cities of Minneapolis and St. Anthony. CSAH 153 (Lowry Ave/Kenzie Ter) is classified as an A-Minor Augmenter. Attachment 02 provides a map of the project location.

The project objectives are to improve safety, accessibility, and mobility for people who walk, roll, bike, and drive along the corridor. Photos depicting the roadway's existing condition are included in Attachment 03.

This project represents the third phase of improvements along the CSAH 153 (Lowry Ave) corridor. While engagement for the proposed project segment has not yet occurred, previous engagement has shaped the overall corridor design, including the desire to see improvements that promote livability, safety, and accessibility for all modes, while also promoting business along the corridor.

In recognition of the surrounding land uses, it's anticipated that different typical sections will be selected for the west segment (extending from Johnson St NE to Stinson Pkwy) versus the east segment (extending from Stinson Pkwy to St. Anthony Pkwy). The project will include, but is not limited to the following elements. The specific types of improvements and locations will be determined as part of the design process and based on additional community input, data analysis, and environmental review. Attachment 04 includes the potential typical sections for the corridor, and Attachment 05 includes the potential concept.

- Roadway improvements; including the replacement of deteriorated pavement, pavement substructure, curb and gutter, and storm sewer structures.
- Safety improvements; including dedicated left turn lanes at signalized intersections, pedestrian crossing enhancements, and dedicated off-street bicycle facilities to separate people biking from driving.
- Pedestrian improvements; such as, ADA compliant ramps, upgraded sidewalks (free of obstructions), pedestrian scale lighting, high visibility crosswalk markings, curb extensions, and raised medians.
- Bicycle improvements; such as the introduction of a dedicated off-street facility for people biking (contingent on the design process).
- For people taking transit, this project will improve first and last mile connections to Metro Transit Route 32. Metro Transit has identified this corridor as a priority for arterial bus rapid transit (aBRT) prior to 2040.
- Streetscaping improvements; such as the introduction of green space for boulevards, lighting and stormwater management. County staff will explore the feasibility of adding additional green space where medians are shown in the proposed concept.

TRANSPORTATION IMPROVEMENT PROGRAM (TIP) DESCRIPTION - will be used in TIP CSAH 153 (Lowry Ave/Kenzie Ter) from 150' E of Johnson St NE to 200' W of if the project is selected for funding. See MnDOT's TIP description guidance. St. Anthony Blvd in the cities of Minneapolis and St. Anthony.

Include both the CSAH/MSAS/TH references and their corresponding street names in the TIP Description (see Resources link on Regional Solicitation webpage for examples).

Project Length (Miles)

0.97

to the nearest one-tenth of a mile

Project Funding

Are you applying for competitive funds from another source(s) to implement this No

If yes, please identify the source(s) Not Applicable **Federal Amount** \$7,000,000.00 **Match Amount** \$6,090,000.00

Minimum of 20% of project total

Project Total \$13,090,000.00

For transit projects, the total cost for the application is total cost minus fare revenues.

Match Percentage 46.52%

Minimum of 20%

Compute the match percentage by dividing the match amount by the project total

Source of Match Funds Hennepin County

A minimum of 20% of the total project cost must come from non-federal sources; additional match funds over the 20% minimum can come from other federal sources

Preferred Program Year

Select one: 2028

Select 2026 or 2027 for TDM and Unique projects only. For all other applications, select 2028 or 2029.

Additional Program Years:

Select all years that are feasible if funding in an earlier year becomes available.

Requirements - All Projects

All Projects

1. The project must be consistent with the goals and policies in these adopted regional plans: Thrive MSP 2040 (2014), the 2040 Transportation Policy Plan (2018), the 2040 Regional Parks Policy Plan (2018), and the 2040 Water Resources Policy Plan (2015).

Check the box to indicate that the project meets this requirement.

Yes

2. The project must be consistent with the 2040 Transportation Policy Plan. Reference the 2040 Transportation Plan goals, objectives, and strategies that relate to the project.

Briefly list the goals, objectives, strategies, and associated pages:

A) Transportation System Stewardship (p 2.2-2.4)

Objectives A & B; Strategies A1 & A2

The project will reconstruct the roadway to update assets to a state of good repair. The roadway and related assets are beyond their useful life. The project will include sidewalk improvements and add an off-street bikeway which will encourage people to make local trips walking and biking, which can reduce traffic and extend the useful life of the roadway.

B) Safety and security (p 2.5-2.9)

Objectives A & B; Strategies B1, B3, B4 & B6

The project is improving safety outcomes for all users. The project is adding multimodal facilities and supports traffic calming strategies by reducing the number of travel lanes on CSAH 153 (Lowry Ave/Kenzie Ter) and adding boulevards to increase space between people driving and non-motorized users. Intersection improvements are anticipated at key crossing locations.

C) Access to destinations (p 2.10-2.25)

Objectives A, B, C, D & E; Strategies C1, C2, C3, C4, C8, C9, C15, C16 & C17

The roadway is an A-minor Augmenter that serves as an east-west multimodal connection for residential, recreational and commercial destinations. The project connects to the programmed (CSAH 153) Lowry Ave Phase 1 and Phase 2 projects. The dedicated facility for people biking and improved sidewalk facilities will increase multimodal travel on the corridor.

D) Competitive economy (p 2.26-2.29)

Objectives A, B & C; Strategies D1, D3, D4 & D5

The project improves access to recreation, residential and commercial destinations in northeast Minneapolis and Saint Anthony. The project is within the metropolitan regional job concentration area and will safely integrate people accessing jobs and homes in the area. The project will prepare the corridor for planned future arterial Bus Rapid Transit.

E)Healthy and equitable communities (p 2.30-2.34)

Objectives A, B, C & D; Strategies E1, E2, E3, E4, E5, E6 & E7

The project will build upon outreach completed for CSAH 153 (Lowry Ave) west of the project area. Several events were held to solicit input from key stakeholders. The corridor will significantly improve multimodal transportation, which will encourage alternatives to vehicle trips and decrease transportation related emissions. The project will add boulevards between the separated bikeway and sidewalk to enhance green space.

F) Leveraging transportation investments to guide land use (p 2.35-2.41)

Objectives A & C; Strategies F1, F2, F3, F5, F6, F8

The project supports a Complete Streets design that suits the urban and urban center environment. The project prioritizes multimodal safety and supports safe integration between people driving, biking and walking along the corridor and through intersections.

3. The project or the transportation problem/need that the project addresses must be in a local planning or programming document. Reference the name of the appropriate comprehensive plan, regional/statewide plan, capital improvement program, corridor study document [studies on trunk highway must be approved by the Minnesota Department of Transportation and the Metropolitan Council], or other official plan or program of the applicant agency [includes Safe Routes to School Plans] that the project is included in and/or a transportation problem/need that the project addresses.

List the applicable documents and pages: Unique projects are exempt 1) Hennepin County 2024-2028 Capital Improvement Plan (Attachment 06) from this qualifying requirement because of their innovative nature.

2) Hennepin County 2040 Transportation Plan (pages 2-11 - 2-18)

10) Metro Transit Network Next

URL: metrotransit.org/Data/Sites/1/media/network-next/nn-corridor-profile-lowry.pdf

4. The project must exclude costs for studies, preliminary engineering, design, or construction engineering. Right-of-way costs are only eligible as part of transit stations/stops, transit terminals, park-and-ride facilities, or pool-and-ride lots. Noise barriers, drainage projects, fences, landscaping, etc., are not eligible for funding as a standalone project, but can be included as part of the larger submitted project, which is otherwise eligible. Unique project costs are limited to those that are federally eligible.

Check the box to indicate that the project meets this requirement.

Yes

5. Applicant is a public agency (e.g., county, city, tribal government, transit provider, etc.) or non-profit organization (TDM and Unique Projects applicants only). Applicants that are not State Aid cities or counties in the seven-county metro area with populations over 5,000 must contact the MnDOT Metro State Aid Office prior to submitting their application to determine if a public agency sponsor is required.

Check the box to indicate that the project meets this requirement.

Yes

6. Applicants must not submit an application for the same project elements in more than one funding application category.

Check the box to indicate that the project meets this requirement.

Yes

7. The requested funding amount must be more than or equal to the minimum award and less than or equal to the maximum award. The cost of preparing a project for funding authorization can be substantial. For that reason, minimum federal amounts apply. Other federal funds may be combined with the requested funds for projects exceeding the maximum award, but the source(s) must be identified in the application. Funding amounts by application category are listed below in Table 1. For unique projects, the minimum award is \$500,000 and the maximum award is the total amount available each funding cycle (approximately \$4,000,000 for the 2024 funding cycle).

Strategic Capacity (Roadway Expansion): \$1,000,000 to \$10,000,000 Roadway Reconstruction/Modernization: \$1,000,000 to \$7,000,000

Traffic Management Technologies (Roadway System Management): \$500,000 to \$3,500,000

Spot Mobility and Safety: \$1,000,000 to \$3,500,000

Bridges Rehabilitation/Replacement: \$1,000,000 to \$7,000,000

Check the box to indicate that the project meets this requirement.

Yes

8. The project must comply with the Americans with Disabilities Act (ADA).

Check the box to indicate that the project meets this requirement.

Yes

9. In order for a selected project to be included in the Transportation Improvement Program (TIP) and approved by USDOT, the public agency sponsor must either have a current Americans with Disabilities Act (ADA) self-evaluation or transition plan that covers the public right of way/transportation, as required under Title II of the ADA. The plan must be completed by the local agency before the Regional Solicitation application deadline. For future Regional Solicitation funding cycles, this requirement may include that the plan has undergone a recent update, e.g., within five years prior to application.

The applicant is a public agency that employs 50 or more people and has a completed ADA transition plan that covers the public right of way/transportation.

Yes

(TDM and Unique Project Applicants Only) The applicant is not a public agency subject to the self-evaluation requirements in Title II of the ADA.

Date plan completed:

08/31/2015

Link to plan:

hennepin.us/-/media/hennepinus/residents/transportation/documents/adasidewalk-transition-plan.pdf

The applicant is a public agency that employs fewer than 50 people and has a completed ADA self-evaluation that covers the public right of way/transportation.

Date self-evaluation completed:

Link to plan:

Upload plan or self-evaluation if there is no link

Upload as PDF

10. The project must be accessible and open to the general public.

Check the box to indicate that the project meets this requirement.

Yes

11. The owner/operator of the facility must operate and maintain the project year-round for the useful life of the improvement. This includes assurance of year-round use of bicycle, pedestrian, and transit facilities, per FHWA direction established 8/27/2008 and updated 4/15/2019. Unique projects are exempt from this qualifying requirement.

Check the box to indicate that the project meets this requirement.

Yes

12. The project must represent a permanent improvement with independent utility. The term ?independent utility? means the project provides benefits described in the application by itself and does not depend on any construction elements of the project being funded from other sources outside the regional solicitation, excluding the required non-federal match. Projects that include traffic management or transit operating funds as part of a construction project are exempt from this policy.

Check the box to indicate that the project meets this requirement.

Yes

13. The project must not be a temporary construction project. A temporary construction project is defined as work that must be replaced within five years and is ineligible for funding. The project must also not be staged construction where the project will be replaced as part of future stages. Staged construction is eligible for funding as long as future stages build on, rather than replace, previous work.

Check the box to indicate that the project meets this requirement.

Yes

14. The project applicant must send written notification regarding the proposed project to all affected state and local units of government prior to submitting the application.

Check the box to indicate that the project meets this requirement.

Yes

Roadways Including Multimodal Elements

1. All roadway projects must be identified as a principal arterial (non-freeway facilities only) or A-minor arterial as shown on the latest TAB approved roadway functional classification map.

Bridge Rehabilitation/Replacement projects must be located on a minor collector and above functionally classified roadway in the urban areas or a major collector and above in the rural areas

Check the box to indicate that the project meets this requirement.

Yes

Roadway Strategic Capacity and Reconstruction/Modernization and Spot Mobility projects only:

2. The project must be designed to meet 10-ton load limit standards.

Check the box to indicate that the project meets this requirement.

Yes

Bridge Rehabilitation/Replacement and Strategic Capacity projects only:

3. Projects requiring a grade-separated crossing of a principal arterial freeway must be limited to the federal share of those project costs identified as local (non-MnDOT) cost responsibility using MnDOT?s ?Cost Participation for Cooperative Construction Projects and Maintenance Responsibilities? manual. In the case of a federally funded trunk highway project, the policy guidelines should be read as if the funded trunk highway route is under local jurisdiction.

Check the box to indicate that the project meets this requirement.

4. The bridge must carry vehicular traffic. Bridges can carry traffic from multiple modes. However, bridges that <u>are exclusively</u> for bicycle or pedestrian traffic must apply under one of the Bicycle and Pedestrian Facilities application categories. Rail-only bridges are ineligible for funding.

Check the box to indicate that the project meets this requirement.

Bridge Rehabilitation/Replacement projects only:

5. The length of the in-place structure is 20 feet or longer.

Check the box to indicate that the project meets this requirement.

6. The bridge must have a Local Planning Index (LPI) of less than 60 OR a National Bridge Inventory (NBI) Rating of 3 or less for either Deck Geometry, Approach Roadway, or Waterway Adequacy as reported on the most recent Minnesota Structure Inventory Report.

Check the box to indicate that the project meets this requirement.

Roadway Expansion, Reconstruction/Modernization, and Bridge Rehabilitation/Replacement projects only:

7. All roadway projects that involve the construction of a new/expanded interchange or new interchange ramps must have approval by the Metropolitan Council/MnDOT Interchange Planning Review Committee prior to application submittal. Please contact David Elvin at MnDOT (David.Elvin@state.mn.us or 651-234-7795) to determine whether your project needs to go through this process as described in Appendix F of the 2040 Transportation Policy Plan.

Check the box to indicate that the project meets this requirement.

Specific Bicycle and Pedestrian Elements

Other Bicycle and Pedestrian Elements

Requirements - Roadways Including Multimodal Elements

| Specific Roadway Elements | |
|--|-----------------|
| CONSTRUCTION PROJECT ELEMENTS/COST ESTIMATES | Cost |
| Mobilization (approx 5% of total cost) | \$516,000.00 |
| Removals (approx 5% of total cost) | \$430,000.00 |
| Roadway (grading, borrow, etc.) | \$646,360.00 |
| Roadway (aggregates and paving) | \$1,320,000.00 |
| Subgrade Correction (muck) | \$0.00 |
| Storm Sewer | \$1,037,000.00 |
| Ponds | \$0.00 |
| Concrete Items (curb & gutter, sidewalks, median barriers) | \$608,900.00 |
| Traffic Control | \$516,000.00 |
| Striping | \$107,500.00 |
| Signing | \$42,420.00 |
| Lighting | \$196,000.00 |
| Turf - Erosion & Landscaping | \$518,000.00 |
| Bridge | \$0.00 |
| Retaining Walls | \$1,430,000.00 |
| Noise Wall (not calculated in cost effectiveness measure) | \$0.00 |
| Traffic Signals | \$510,000.00 |
| Wetland Mtigation | \$0.00 |
| Other Natural and Cultural Resource Protection | \$0.00 |
| RR Crossing | \$0.00 |
| RoadwayContingencies | \$2,420,870.00 |
| Other Roadway Elements | \$194,000.00 |
| Totals | \$10,493,050.00 |

| CONSTRUCTION PROJECT ELEMENTS/COST ESTIMATES | Cost |
|--|--------------|
| Path/Trail Construction | \$331,500.00 |
| Sidewalk Construction | \$349,350.00 |
| On-Street Bicycle Facility Construction | \$0.00 |
| Right-of-Way | \$0.00 |
| Pedestrian Curb Ramps (ADA) | \$200,000.00 |
| Crossing Aids (e.g., Audible Pedestrian Signals, HAWK) | \$107,000.00 |
| Pedestrian-scale Lighting | \$388,000.00 |
| Streetscaping | \$518,000.00 |
| Wayfinding | \$0.00 |
| Bicycle and Pedestrian Contingencies | \$599,300.00 |

\$103,800.00

Totals \$2,596,950.00

| Specific Transit and TDM Elements | | |
|---|-------------------|--------|
| CONSTRUCTION PROJECT ELEMENTS/COST ESTIMATES | | Cost |
| Fixed Guideway Elements | | \$0.00 |
| Stations, Stops, and Terminals | | \$0.00 |
| Support Facilities | | \$0.00 |
| Transit Systems (e.g. communications, signals, controls, fare | collection, etc.) | \$0.00 |
| Vehicles | \$0.00 | |
| Contingencies | \$0.00 | |
| Right-of-Way | \$0.00 | |
| Other Transit and TDM Elements | | \$0.00 |
| Totals | | \$0.00 |
| Transit Operating Costs | | |
| Number of Platform hours | 0 | |
| Cost Per Platform hour (full loaded Cost) | \$0.00 | |
| Subtotal | \$0.00 | |
| Other Costs - Administration, Overhead, etc. | \$0.00 | |

PROTECT Funds Eligibility

One of the newfederal funding sources is Promoting Resilient Operations for Transformative, Efficient, and Cost-Saving Transportation (PROTECT). Please describe which specific elements of your project and associated costs out of the Total TAB-Eligible Costs are eligible to receive PROTECT funds. Examples of potential eligible items may include: storm sewer, ponding, erosion control/landscaping, retaining walls, new bridges over floodplains, and road realignments out of floodplains.

INFORMATION: Promoting Resilient Operations for Transformative, Efficient, and Cost-Saving Transportation (PROTECT) Formula Program Implementation Guidance (dot.gov).

Response:

Based on a planning level review of the proposed scope of work, the following project elements appear to be eligible for the PROTECT Program: Storm Sewer, Landscaping, and Streetscaping (within the Bicycle and Pedestrian Elements)

Totals

 Total Cost
 \$13,090,000.00

Measure B: 2040 Forecast ADT

Use Metropolitan Council model to determine forecast (2040) ADT volume

No

0

If checked, METC Staff will provide Forecast (2040) ADT volume

OR

Identify the approved county or city travel demand model to determine forecast (2040) ADT volume

Hennepin County conducted a comprehensive travel demand forecasting analysis based on the Metropolitan Council's regional activity based model. Forecast traffic volumes were based on a combination of socio-economic and land use assumptions. It should be noted that the future transportation network was assumed to include projects identified in the county's Capital Improvement Program. Attachment 7 illustrates the forecast traffic volumes.

Forecast (2040) ADT volume

Measure A: Engagement

i. Describe any Black, Indigenous, and People of Color populations, Iow-income populations, disabled populations, youth, or older adults within a ½ mile of the proposed project. Describe how these populations relate to regional context. Location of affordable housing will be addressed in Measure C.

9500

ii. Describe how Black, Indigenous, and People of Color populations, low-income populations, persons with disabilities, youth, older adults, and residents in affordable housing were engaged, whether through community planning efforts, project needs identification, or during the project development process.

iii. Describe the progression of engagement activities in this project. A full response should answer these questions:

- 1. What engagement methods and tools were used?
- 2. How did you engage specific communities and populations likely to be directly impacted by the project?
- 3. What techniques did you use to reach populations traditionally not involved in community engagement related to transportation projects?
- 4. How were the project?s purpose and need identified?
- 5. How was the community engaged as the project was developed and designed?
- 6. How did you provide multiple opportunities for of Black, Indigenous, and People of Color populations, Iow income populations, persons with disabilities, youth, older adults, and residents in affordable housing to engage at different points of project development?
- 7. How did engagement influence the project plans or recommendations? How did you share back findings with community and re-engage to assess responsiveness of these
- 8. If applicable, how will NEPA or Title VI regulations will guide engagement activities?

Response:

Within 0.5 miles of the project corridor, 24% of the population are Black, Indigenous, and People of Color (BIPOC) and 13% of the population has a disability of any kind. In addition, 19% of the population are under the age of 18 and 14% are over the age of 65. Finally, 20% of the population within 0.5 miles of the project area has a household income under 200% of the federal poverty level. These demographic profiles are from the 2017 - 2021 5-year ACS estimates.

Public engagement will start in the beginning stages of project development. The CSAH 153 (Lowry Ave NE/Kenzie Ter) Phase 3 Reconstruction Project has been informed thorough previous public engagement for reconstruction activities to the west as well as by the 2015 Lowry Ave NE Corridor Plan and Implementation Framework (hennepin.us/-/media/hennepinus/residents/transportation/lowry-ave-community-works/lowry-avenue-northeast-final-plan-10-15.pdf). Public engagement for the first phase of reconstruction includes the use of a stakeholder advisory committee, in-person events, direct business outreach, virtual events and a public workshop. Events attended included farmers markets, open streets, and direct work with neighborhood association meetings. Outreach occurred in two phases from 2021 to 2022. Materials were presented in both English and Spanish to ensure inclusivity throughout the engagement process.

The 2015 Lowry Ave NE Corridor and Implementation Framework utilized three committees including representatives of neighborhood organization, business associations, local institutions and property owners. As part of the planning process, staff from Hennepin County also worked with local high school students and Level 2 English language Learners across several different languages to solicit feedback from a BIPOC residents and stakeholders. Key themes identified through public engagement included poor pedestrian conditions, a lack of streetscaping and inadequate stormwater management, among other concerns.

Engagement will be coordinated with the City of Minneapolis, the City of St. Anthony and Metro Transit to identify appropriate strategies to facilitate community input, particularly from BIPOC residents, youth, older adults and other disadvantaged communities. Staff from communications will be included in the project team to ensure the use of best practices. Historically, strategies to engage disadvantaged populations include, but are not limited to, working directly with community groups and neighborhood organizations, focus groups, technical advisory committees, virtual and in-person events, surveys, and physical signage throughout the project area.

Measure B: Disadvantaged Communities Benefits and Impacts

Describe the project?s benefits to Black, Indigenous, and People of Color populations, low-income populations, children, people with disabilities, youth, and older adults. Benefits could relate to:

- ? pedestrian and bicycle safety improvements;
- ? public health benefits:
- ? direct access improvements for residents or improved access to destinations such as jobs, school, health care, or other;
- ? travel time improvements:
- ? gap closures;
- ? new transportation services or modal options;
- ? leveraging of other beneficial projects and investments;
- ? and/or community connection and cohesion improvements.

This is not an exhaustive list. A full response will support the benefits claimed, identify benefits specific to Disadvantaged communities residing or engaged in activities near the project area, identify benefits addressing a transportation issue affecting Disadvantaged communities specifically identified through engagement, and substantiate benefits with data.

Acknowledge and describe any negative project impacts to Black, Indigenous, and People of Color populations, low-income populations, children, people with disabilities, youth, and older adults. Describe measures to mitigate these impacts. Unidentified or unmitigated negative impacts may result in a reduction in points.

Below is a list of potential negative impacts. This is not an exhaustive list.

- ? Decreased pedestrian access through sidewalk removal / narrowing, placement of barriers along the walking path, increase in auto-oriented curb cuts, etc.
- ? Increased speed and/or ?cut-through? traffic.
- ? Removed or diminished safe bicycle access.
- ? Inclusion of some other barrier to access to jobs and other destinations.

Response:

The CSAH 153 (Lowry Ave NE/Kenzie Ter) Phase 3 Reconstruction Project will benefit BIPOC populations, low-income households, people with disabilities, children, youth, and older adults through introducing complete streets elements to accommodate all modes of travel. Attachment 08 provides an overview of key community resources and destinations which will benefit from improved access through the project as well as census tracts with high scores of the CDC/ATSDR Social Vulnerability Index (SVI), a resource that uses a range of census variables to measure resilience to disasters. A portion of the 0.5-mile project buffer south of CSAH 88 has a high CDC SVI score, as well as much of Northeast Minneapolis west of the project. This indicates that the project would have a direct benefit on vulnerable communities who may be more likely to walk, roll, cycle, or use transit.

The current design of CSAH 153 (Lowry Ave NE/Kenzie Ter) does not provide a positive experience for nonmotorized users. East of Stinson Pkwy, there are no dedicated facilities for people biking. The construction of off-street facilities will be explored through the design process to create an all ages and abilities connection to proposed shared use paths west along CSAH 153 (Lowry Ave NE/Kenzie Ter), creating a continuous off-street connection through the entirety of Northeast Minneapolis to the Mississippi River. This will provide safe connections for residents to schools such as Pillsbury Elementary and Northeast Middle School, and various childcare centers and places of worship in the project area as well as resources throughout Northeast Minneapolis.

The proposed project will also provide direct benefit for older adults, people with disabilities and others with limited mobility through a reconstructed pedestrian realm. Existing sidewalks are narrow and contain aging pedestrian ramps, obstructions, and defects. Sidewalks along CSAH 153 (Kenzie Ter) are at back of curb, negatively impacting snow removal operations and providing an uncomfortable experience for people walking and rolling. As feasible, pedestrian crossing enhancements such as curb extensions, pedestrian refuges, pedestrian beacons, and high visibility crosswalks will be implemented to promote safety and mobility for pedestrians.

Increased noise and impacts to the roadway and sidewalks are anticipated during construction. The contractor will be required to follow temporary traffic control plans which provide instructions on detour routes for all people traveling through the corridor. Access to adjacent buildings will be critical, and staff will seek out opportunities to ensure that nearby businesses and services are not negatively impacted during construction.

(Limit 2,800 characters; approximately 400 words):

Describe any affordable housing developments?existing, under construction, or planned?within ½ mile of the proposed project. The applicant should note the number of existing subsidized units, which will be provided on the Socio-Economic Conditions map. Applicants can also describe other types of affordable housing (e.g., naturally-occurring affordable housing, manufactured housing) and under construction or planned affordable housing that is within a half mile of the project. If applicable, the applicant can provide self-generated PDF maps to support these additions. Applicants are encouraged to provide a self-generated PDF map describing how a project connects affordable housing residents to destinations (e.g., childcare, grocery stores, schools, places of worship).

Describe the project?s benefits to current and future affordable housing residents within ½ mile of the project. Benefits must relate to affordable housing residents. Examples may include:

- ? specific direct access improvements for residents
- ? improved access to destinations such as jobs, school, health care or other;
- ? new transportation services or modal options;
- ? and/or community connection and cohesion improvements.

This is not an exhaustive list. Since residents of affordable housing are more likely not to own a private vehicle, higher points will be provided to roadway projects that include other multimodal access improvements. A full response will support the benefits claimed, identify benefits specific to residents of affordable housing, identify benefits addressing a transportation issue affecting residents of affordable housing specifically identified through engagement, and substantiate benefits with data.

Response:

A total of 8 affordable subsidized housing developments are located within 0.5 miles of the project area, many of which specifically target serving those with disabilities, seniors, and families with children. Attachment 09 provides a map and full detail summary of these locations, including unit sizes and affordability limits based on area median incomes. The proposed project would provide a direct benefit to residents of affordable housing through the allocation of existing right of way to facilities for those walking, rolling, cycling, and using transit. Currently, the existing 4-lane divided configuration creates significant a barrier for those crossing CSAH 153 (Lowry Ave/Kenzie Ter). As identified in the Met Council generated Socio-Economic Conditions map, 546 subsidized units exist in census tracts within 0.5 miles of the project.

One development of note is Walker Methodist, a retirement community providing subsidized independent and assisted living apartments. Walker Methodist includes 45 affordable one-bedroom units for seniors, which represents a significant population of pedestrians and transit users who would benefit from proposed multimodal improvements. Another notable development is Urban Grove, a manufactured housing park. While not subsidized, Urban Grove represents a naturally occurring form of owner-occupied housing which is unique for established neighborhood contexts.

The project will also create a safe route to school for families in affordable housing attending schools such as Northeast Middle School as well as improving access to the numerous destinations along the corridor as noted in Attachment 08 including libraries, childcare and places of worship. The project will also leverage previous county investments along CSAH 153 (Lowry Ave NE) as well as the improving first and last mile connections to the future F line service planned along TH 65 (Central Ave).

This project will also directly benefit corridor users and residents of affordable housing through conditions for multimodal users by addressing drainage issues present along the project area through the introduction of green infrastructure. Residents of the Urban Grove have been impacted by historical flooding issues, as well as users along CSAH 153 (Kenzie Ter). Sidewalks and intersections experience severe freeze and thaw cycles that lead to ice and snow accumulation and large areas of ponding. Drainage issues pose a safety hazard, particularly to those with limited mobility, and contribute to the deterioration of roadside assets. Green infrastructure and the introduction of boulevards along CSAH 153 (Kenzie Ter) will also provide a positive experience to residents of affordable housing walking and rolling through the project area.

(Limit 2,800 characters; approximately 400 words):

Measure D: BONUS POINTS

Project is located in an Area of Concentrated Poverty:

Project?s census tracts are above the regional average for population in poverty or population of color (Regional Environmental Justice Area):

Project located in a census tract that is below the regional average for population yes in poverty or populations of color (Regional Environmental Justice Area):

Measure B: Geometric, Structural, or Infrastructure Improvements

Improved roadway to better accommodate freight movements:

Response:

Yes

Lowry Ave NE from Johnson St NE to Stinson Pkwy was originally constructed with brick pavers, and has since been overlaid with bituminous pavement - suggesting less than ideal conditions for providing a smooth surface for people driving. A StreetLight analysis estimates 730 daily commercial vehicles (Attachment 10).

From a freight mobility perspective, the proposed project is anticipated to remove 2 unwarranted traffic signals, reducing unnecessary delay for trucks travelling along Lowry Ave NE.

From a freight access perspective, dedicated left-turn lanes are anticipated to be retained east of Stinson Pkwy to facilitate delivery operations for nearby businesses.

Yes

Lowry Ave NE from Johnson St NE to Stinson Pkwy includes steep topography, limiting sight lines for people entering from north/south streets. Also, due to the lack of boulevard space, utility poles are located within the sidewalk facility - presenting sight obstructions.

Compact intersection designs will be introduced to promote traffic calming, reduce crossing distances, and maximize sight distance. Raised crosswalks are being constructed on north/south local streets within the Lowry Ave NE Phase 1 Reconstruction, and this design will be considered on this Phase 3 project.

Boulevard space will maximized to the extent feasible to provide space for utility poles, snow storage, and signs.

(Limit 700 characters; approximately 100 words)

Improved clear zones or sight lines:

Response:

| Response: | | | |
|-----------|--|--|--|
| | | | |

Lowry Ave NE was expanded in the 1960s to prioritize driving and parking purposes along the corridor. This resulted in excessive pavement surfaces, relatively narrow sidewalk facilities, and minimal boulevard space. The 4-lane undivided design east of Stinson Pkwy will be evaluated for conversion to a 3-lane or 2-lane to allow for the reallocation of space for other modes.

The project will introduce proven traffic calming strategies such as compact intersections, raised medians, and consistent boulevards. These design strategies are better suited for the surrounding residential and commercial land uses that encourage all forms of transportation.

(Limit 700 characters; approximately 100 words)

Access management enhancements:

Response:

Yes

Approximately 42 access points (including 32 driveways and 10 local streets) currently exist where all turning movements are generally permitted. This presents the potential for rear-end, left-turn, and right-angle crashes.

The following strategies will be evaluated to reduce conflict points involving people driving. Crossing access for people walking and biking will be retained to the extent feasible.

- Right-in/right-out restrictions via medians to leverage the surrounding grid network
- Driveway consolidation for commercial businesses
- Potential removal of 2 unwarranted signals to improve travel time reliability
- Dedicated left-turn lanes at key intersections to concentrate turns

Yes

Lowry Ave NE west of Stinson Pkwy includes relatively steep slopes due to the topography. Conversely, Lowry Ave NE east of Stinson Pkwy includes a horizontal curve that is somewhat unexpected for eastbound drivers.

Since the built environment is well established west of Stinson Pkwy, Complete Streets design strategies (such as compact intersections, medians, and boulevards) will be leveraged to minimize negative impacts caused by steep slopes.

Also, the anticipated conversion of the 4-lane design east of Stinson Pkwy will allow for a full redesign of the horizontal curve to promote user predictable and satisfy current design standards - reducing the potential for lane departure crashes.

(Limit 700 characters; approximately 100 words)

Vertical/horizontal alignment improvements:

Response:

(Limit 700 characters; approximately 100 words) Improved stormwater mitigation:

Yes

| _ | |
|-----|--------|
| Roc | nonse: |
| LE2 | ponse. |

The existing conditions along Lowry Ave NE include minimal pervious surfaces as the current design prioritizes people driving and parking. Flooding issues have been reported by the city for the area near Urban Grove - which is consistent with MetCouncil's Flood Map Screening Tool.

Staff will collaborate with the cities and the Mississippi River WMO to explore BMPs for improving water quality and withstanding desired flood events. Boulevard space is anticipated to be maximized, including relatively wide medians east of Stinson Pkwy, to assist with controlling stormwater. Consideration will be given to species that can withstand Minnesota's harsh climate to ensure their effectiveness.

(Limit 700 characters; approximately 100 words)

Signals/lighting upgrades:

Response:

(Limit 700 characters; approximately 100 words)

Other Improvements

Response:

Yes

Existing signals are showing signs of deterioration. Also, the pedestrian crossing beacon system at 27th Ave NE (enhanced with in-road LEDs) has not been cost effective to maintain.

Alternative intersection control will be considered at 2 intersections where unwarranted signals currently exist (Hayes St NE & Autumn Woods). The signal at Stinson Pkwy will upgraded to current design standards - eliminating median pedestals that experience knockdowns. Pedestrian crossing beacon systems will be designed to meet standards to promote cost effective maintenance.

Lighting will be designed to current standards, which is especially key at intersections that experience frequent pedestrian crossings.

Yes

People walking - boulevard areas will improve pedestrian experiences by providing separation from people driving and designating space for snow storage, signs, and utility poles.

People using transit - first/last mile connections for future BRT service planned for Route 32 as part of Network Next (metrotransit.org/Data/Sites/1/media/network-next/nn-corridor-profile-lowry.pdf)

People biking - accommodations are anticipated similar to Lowry Ave NE Phase 1 (multi-use trail facility along north side) to promote use by All Ages and Abilities.

People driving - conversion of 2 unwarranted signals to alternative intersection control devices to improve travel time reliability along the corridor.

Measure A: Roadway Projects that do not Include Railroad Grade-Separation Elements

Crash Modification Factor Used:

EXPLANATION of methodology and assumptions used:(Limit 1,400 characters; approximately 200 words)

Attachment 11 listed reported crashes (2020-2022) along the project, and Attachment 12 lists CMFs applied in the B/C Analysis.

- XX) Countermeasure: Crashes targeted (CMF ID, % reduction)
- 01) Remove unwarranted signal: All (CMF 00332, 25%)
- 02) Upgrade to 12" lenses: RA (CMF 01444, 46%)
- 03) Improve ped crossings: Ped (CMF 01697, 25%)
- 04) Construct multi-use trail: Bike (CMF 09250, 25%)
- 05) Resurface pavement: RE, SS, LT, RA, OR, & HO (CMF 09300, 14.7%)
- 06) Install median: All (FHWA Desk Ref, assumed at 12.5%)
- 07) Prohibit parking: Parked Veh (no CMF, 100%)
- 08) Introduce streetscaping: All (NCHRP Report 612, 5%)
- 09) Remove pedestals within medians: Pedestal Knockdowns (no CMF, 100%)

The Benefit/Cost Analysis evaluated the project corridor in seven different sections (comprised of major intersections and segments) to target crash themes. Up to two (of the nine selected) CMFs were applied to each crash based on the reported crash type, along with the anticipated benefit provided by each safety countermeasure. A maximum of four CMFs were applied to each individual intersection or segment since the project corridor experiences diverse crash types among people walking, biking, and driving.

The expected service life for each improvement was entered as 20 years in the Benefit/Cost Worksheets based on the service life information included in the 2024 Highway Safety Improvement Program guidelines.

The overall crash reduction expected from the project is 33% (based on a 67% crash modification factor). Approximately 33% (2 crashes) of the total number of reported crashes from the years 2020-2022 will be reduced annually through the implementation of proved safety countermeasures as part of this project.

Measure B: Pedestrian Safety

Determine if these measures do not apply to your project. Does the project match either of the following descriptions?

If either of the items are checked yes, then score for entire pedestrian safety measure is zero. Applicant does not need to respond to the sub-measures and can proceed to the next section.

Project is primarily a freeway (or transitioning to a freeway) <u>and</u> does not provide safe and comfortable pedestrian facilities and crossings.

Existing location lacks any pedestrian facilities (e.g., sidewalks, marked crossings, wide shoulders in rural contexts) and project does not add pedestrian elements (e.g., reconstruction of a roadway without sidewalks, that doesn?t also add pedestrian crossings and sidewalk or sidepath on one or both sides).

SUB-MEASURE 1: Project-Based Pedestrian Safety Enhancements and Risk Elements

To receive maximum points in this category, pedestrian safety countermeasures selected for implementation in projects should be, to the greatest extent feasible, consistent with the countermeasure recommendations in the Regional Pedestrian Safety Action Plan and state and national best practices. Links to resources are provided on the Regional Solicitation Resources web page.

Please answer the following two questions with as much detail as possible based on the known attributes of the proposed design. If any aspect referenced in this section is not yet determined, describe the range of options being considered, to the greatest extent available. If there are project elements that may increase pedestrian risk, describe how these risks are being mitigated.

1. Describe how this project will address the safety needs of people crossing the street at signalized intersections, unsignalized intersections, midblock locations, and roundabouts.

Treatments and countermeasures should be well-matched to the roadway?s context (e.g., appropriate for the speed, volume, crossing distance, and other location attributes). Refer to the Regional Solicitation Resources web page for guidance links.

Response:

The existing configuration along CSAH 153 (Lowry Ave NE) varies across the project corridor as described below. This project presents an opportunity to reallocate space and introduce complete streets best practices for people walking along and across CSAH 153 (Lowry Ave NE).

- From Johnson St NE to Stinson Pkwy: Generally a 2-lane undivided roadway with on-street parking permitted along both sides.
- From Stinson Pkwy to St. Anthony Blvd: Generally a 4-lane divided roadway with dedicated turn lanes provided at intersections & driveways.

Signalized intersections

The project is anticipated to replace 1 of the existing signalized intersections (at Stinson Pkwy) and introduce appropriate lane configurations as the roadway does not transition properly on the west and east approaches at the Lowry/Stinson intersection. In addition, lighting conditions will be upgraded to provide adequate nighttime visibility. Furthermore, consideration will be given to the placement and orientation of pedestrian and bicycle facilities at the Lowry/Stinson intersection to promote comfortable crossings through this area that experiences high multimodal activity. Signal components such as pedestrian countdown timers, APS, and protected/permitted left-turn phasing will communicate necessary instructions to intersection users.

Unsignalized intersections

This project is anticipated to redesign each of the 10 unsignalized intersections. Although contingent on the project development process, the planning level concept identifies approximately 2 crossing beacons and 5 high-visibility crosswalk markings that may be feasible at unsignalized intersections. Of note, is the narrowing of curb lines in recognition of anticipated on-street parking restrictions that will reduce the crossing distance by approximately 18' for the segment extending from Johnson St NE to Stinson Pkwy. Also, these unsignalized intersections will be properly illumined with upgraded lighting. In addition, although not shown on the concept, raised pedestrian crosswalks will be considered on the north/south approaches of local streets as part of the project development process - in a similar manner as the county's Lowry Ave NE Phase 1 project (url: hennepin.us/residents/transportation/lowry-corridor).

Roundabout intersections

Although contingent on the project development process, no roundabouts are anticipated.

Midblock locations

The proposed project will aim to encourage pedestrian crossings at intersections, however, mid-block crossings are not anticipated to be prohibited via installation of barriers. Also, access management revisions from Stinson Pkwy to St. Anthony Blvd will be evaluated during project development to consolidate redundant driveways and minimize conflicts with people walking and biking.

(Linit 2,800 characters; approximately 400 words)

Is the distance in between signalized intersections increasing (e.g., removing a signal)?

Select one: Yes

If yes, describe what measures are being used to fill the gap between protected crossing opportunities for pedestrians (e.g., adding High-Intensity Activated Crosswalk beacons to help motorists yield and help pedestrians find a suitable gap for crossing, turning signal into a roundabout to slow motorist speed, etc.).

Response:

Although contingent on the project development process, it's anticipated that alternative intersection control devices may be selected at the following two intersections:

Hayes St NE - This intersection primarily facilitates people walking and biking across CSAH 153 (Lowry Ave NE) as there is a disconnect within the surrounding grid network. The existing traffic signal system was installed during a time when today's proven safety countermeasures (curb extensions, and crossing beacons) were not widely accepted by the transportation industry. It's anticipated that a series of design strategies will be implemented to support a Safe Systems Approach.

Autumn Woods - This intersection serves two high density residential complexes on either side of CSAH 153 (Lowry Ave NE). Similar to the Hayes St NE, the existing traffic signal system was installed during a time (late 1980s) when today's proven safety countermeasures were not widely accepted. The anticipated conversion from a 4-lane to 2-lane, supplemented with dedicated left-turn lanes, will minimize the potential for dual threat related crashes. In addition, other design strategies (such as curb extensions, medians, and crossing beacons) will be evaluated as part of the project development process as denoted on the planning level concept.

(Linit 1,400 characters; approximately 200 words)

Will your design increase the crossing distance or crossing time across any leg of an intersection? (e.g., by adding turn or through lanes, widening lanes, using a multi-phase crossing, prohibiting crossing on any leg of an intersection, pedestrian bridge requiring length detour, etc.). This does not include any increases to crossing distances solely due to the addition of bike lanes (i.e., no other through or turn lanes being added or widened).

Select one: No.

If yes,

? How many intersections will likely be affected?

Response: 0

? Describe what measures are being used to reduce exposure and delay for pedestrians (e.g., median crossing islands, curb bulb-outs, etc.)

Response:

Although contingent on the project development process, the planning level concept suggests the following changes to pedestrian crossing distances along the CSAH 153 (Lowry Ave NE) Phase 2 Reconstruction project corridor:

Signalized intersections (Stinson Pkwy) - Crossing distances are anticipated to be reduced as described below.

- West approach: Reduction of approximately 18' (from 44' to 26') by eliminating on-street parking
- East approach: Reduction of approximately 20' (from 66' to 46') by converting from a 4-lane divided to a 2-lane divided configuration

Non-signalized intersections without left-turn lanes (Ulysses, Hayes, Garfield, Arthur, Cleveland, Benjamin, & McKinley) - Crossing distances are anticipated to be reduced by approximately 44' (from 44' to 26') by eliminating on-street parking

Non-signalized intersections with left-turn lanes (Stinson, Lowry, Autumn Woods, & 27th) - Crossing distances are anticipated to be reduced by approximately 20' (from 66' to 46') by converting from a 4-lane divided to a 2-lane divided roadway

Overall, the planning level concept illustrates how the narrowing of curb lines will significantly reduce pedestrian crossing distances. In addition, high visibility pavement markings (supplemented with stop bars), crossing beacons, and a raised median (along the east segment) are anticipated to further promote pedestrian safety.

(Limit 1,400 characters; approximately 200 words)

? If grade separated pedestrian crossings are being added and increasing crossing time, describe any features that are included that will reduce the detour required of pedestrians and make the separated crossing a more appealing option (e.g., shallow tunnel that doesn?t require much elevation change instead of pedestrian bridge with numerous switchbacks).

Response:

Although contingent on the project development process, no new grade separated pedestrian crossings are anticipated to be introduced as part of the CSAH 153 (Lowry Ave NE) Phase 3 Reconstruction Project.

If mid-block crossings are restricted or blocked, explain why this is necessary and how pedestrian crossing needs and safety are supported in other ways (e.g., nearest protected or enhanced crossing opportunity).

Response:

Although contingent on the project development process, no mid-block crossings are anticipated to be prohibited as part of the CSAH 153 (Lowry Ave NE) Phase 3 Reconstruction Project.

The east segment, from Stinson Pkwy to St. Anthony Blvd, is relatively unique as there is a high frequency of commercial driveways present along the corridor. It's anticipated that access management strategies will be considered, especially at locations with redundant driveways, to reduce conflicts with people walking along and across CSAH 153 (Lowry Ave NE).

(Limit 1,400 characters; approximately 200 words)

2. Describe how motorist speed will be managed in the project design, both for through traffic and turning movements. Describe any project-related factors that may affect speed directly or indirectly, even if speed is not the intended outcome (e.g., wider lanes and turning radii to facilitate freight movements, adding turn lanes to alleviate peak hour congestion, etc.). Note any strategies or treatments being considered that are intended to help motorists drive slower (e.g., visual narrowing, narrowlanes, truck aprons to mitigate wide turning radii, etc.) or protect pedestrians if increasing motorist speed (e.g., buffers or other separation from moving vehicles, crossing treatments appropriate for higher speed roadways, etc.).

Response:

The CSAH 153 (Lowry Ave NE) Phase 3 Reconstruction Project will introduce several proven design strategies to promote uniform, safe, and reasonable speeds by people driving along the corridor.

West segment (from Johnson St NE to Stinson Pkwy)

The removal of on-street parking will allow for the narrowing of curbs by approximately 18' (from 44' to 26') will promote traffic calming through the presence of curb immediately adjacent to travel lanes. Also, boulevards are anticipated to be introduced to provide separation between people driving and people walking. In addition, raised crosswalks will be considered on the north/south approaches of local streets to slow turning vehicles to/from CSAH 153 (Lowry Ave NE). Furthermore, the introduction a multi-use trail facility will encourage biking by All Ages and Abilities, likely increasing bicycle volumes, and raise awareness of multimodal users.

East segment (from Stinson Pkwy to St. Anthony Blvd)

The potential conversion from a 4-lane divided roadway to a 2-lane divided roadway will also allow for the narrowing of curbs by approximately 20' (from 66' to 46'). The retention of the existing median (whenever possible) provides a continuous vertical element adjacent to travel lanes. County staff will collaborate with the City of St. Anthony to identify the appropriate greening for both the median and boulevards to further maximize the benefits offered by these spaces. Additionally, this east segment includes a high frequency of commercial driveways that will be reviewed for consolidation to promote sound access management along the corridor. Any driveways retained will be reconstructed to design standards to make it more obvious to corridor users of their presence. Furthermore, the introduction of a multi-use trail facility will promote a multimodal user experience along the corridor.

(Limit 2,800 characters; approximately 400 words)

If known, what are the existing and proposed design, operation, and posted speeds? Is this an increase or decrease from existing conditions?

Response:

The existing posted speed limit along (CSAH 153 Lowry Ave NE) is 30 mph.

The proposed design speed limit(s) will be determined as part of the project development process based on data analysis, stakeholder input, and environmental review. At this time, an increase in the existing speed limit is not anticipated. Project elements (such as boulevards, lane widths, and raised medians) will be designed to support the desired speed limit(s).

(Limit 1,400 characters; approximately 200 words)

SUB-MEASURE 2: Existing Location-Based Pedestrian Safety Risk Factors

These factors are based on based on trends and patterns observed in pedestrian crash analysis done for the Regional Pedestrian Safety Action Plan. Check off how many of the following factors are present. Applicants receive more points if more risk factors are present.

Existing road configuration is a One-way, 3+ through lanes

| Existing road configuration is a Two-way, 4+ through lanes | Yes |
|---|-----|
| Existing road has a design speed, posted speed limit, or speed study/data showing 85th percentile travel speeds in excess of 30 MPH or more | Yes |
| Existing road has AADT of greater than 15,000 vehicles per day | |

SUB-MEASURE 3: Existing Location-Based Pedestrian Safety Exposure Factors

These factors are based on based on trends and patterns observed in pedestrian crash analysis done for the Regional Pedestrian Safety Action Plan. Check off how many of the following existing location exposure factors are present. Applicants receive more points if more risk factors are present.

8250

П

List the AADT

Existing road has transit running on or across it with 1+ transit stops in the project area (If flag-stop route with no fixed stops, then 1+ locations in the project area where roadside stops are allowed. Do not count portions of transit routes with no stops, such as non-stop freeway sections of express or limited-stop routes.)

Existing road has high-frequency transit running on or across it and 1+ high-frequency stops in the project area (high-frequency defined as service at least every 15 minutes from 6am to 7pm weekdays and 9am to 6pm Saturdays.)

Existing road is within 500? of 1+ shopping, dining, or entertainment destinations (e.g., grocery store, restaurant)

If checked, please describe:

Metro Transit Route 32 currently provides east/west service to the entirety of the project area, with 14 transit stops within the limits of the proposed reconstruction project. While not on the high frequency network, this route will serve as a future connection to the proposed F Line service anticipated along TH 65 (Central Ave) to the west.

In addition, CSAH 153 (Lowry Ave/Kenzie Ter) is home to several smaller neighborhood commercial destinations east of Stinson Pkwy as well as the St. Anthony Shopping Center which is home to a mix of shopping and dining destinations serving St. Anthony Village as well as adjacent neighborhoods in Northeast Minneapolis. Below is a summary of key locations within 500 feet of the proposed project likely to generate pedestrian activity:

- -Mother Earth Gardens (Retail)
- -Cryptid Hair Parlor (Service)
- -Lempira Market (Grocery Store)
- -Great Dragon (Restaurant)
- -Wine & Canvas (Entertainment)
- -Teasource (Retail)
- -Great Dragon (Restaurant)
- -Hidden Treasures Thrift Store (Shopping)
- -Village Pub (Restaurant)
- -St. Anthony Wine & Spirits (Retail)
- -Dairy Queen (Restaurant)

(Limit 1,400 characters; approximately 200 words)

Existing road is within 500? of other known pedestrian generators (e.g., school, civic/community center, senior housing, multifamily housing, regulatorily-designated affordable housing)

Yes

If checked, please describe:

CSAH 153 (Lowry Ave/Kenzie Ter) also has a variety of civic, residential, and educational destinations within 500 feet of the proposed project which generate pedestrian activity. The following list is a selection of resources along the proposed project area which will benefit from improved multimodal access:

- -Windom Park (Recreation)
- -St. Anthony Park Library (Library)
- -Autumn Woods of St. Anthony (Senior Housing)
- -The Legacy of St. Anthony (Assisted Living Facility)
- -Kenzington Condominiums (Senior Housing)
- -Urban Grove (Manufactured Housing Park)
- -Hayden Grove Senior Living (Assisted Living Facility)
- -Mn Chinese Day Care & Learning Center (Childcare)
- -Walker Methodist, Kenzie (Senior Living)
- -Northeast United Methodist Church (Place of Worship)

In addition, 42% of the population in the project area rent their homes and 20% of households which indicates that the project area is a mix of housing types and affordability levels which in of itself generates pedestrian activity.

(Limit 1,400 characters; approximately 200 words)

Measure A: Multimodal Elements and Existing Connections

Response:

The CSAH 153 (Lowry Ave NE/Kenzie Ter) Phase 3 Reconstruction Project will provide numerous multimodal connections.

For people walking and rolling, this project will provide dedicated sidewalk space (free of obstructions), ADA compliant pedestrian ramps, high visibility crosswalk markings, Accessible Pedestrian Signals (APS), and pedestrian scale lighting. Improvements noted in this proposed project are consistent with Hennepin County's ADA Transition Plan. In addition, boulevard space between the sidewalk and roadway will further separate people driving from people walking and provide a more pleasant user experience. Pedestrian crossing enhancements will also be evaluated at intersections, and crossing distances will be reduced by the new lane configuration proposed for the roadway as well as the addition of medians (where feasible).

In addition, for people taking transit, the walkable and bikeable environment proposed as part of this project will enhance first and last mile connections to Metro Transit's Route 32, and compliment future plans for arterial bus rapid transit (aBRT) that is planned along the corridor. Attachment 13 highlights key multimodal connections and shows that the F Line aBRT service will run within a 1/2 mile of the project area.

While this corridor is not on the RBTN, it does intersect and provide direct connections to other RBTN routes, most notably at Stinson Pkwy. County staff will coordinate with the Minneapolis Park and Recreation Board as part of this project or a future project to align with the vision for the Grand Rounds Missing Link near the termini of this project corridor. Finally, for people biking, an off-street facility will be provided on one side of the roadway and will provide a consistent user experience across CSAH 153 (Lowry Ave/Kenzie Ter) to the west. The Met Council's Regional Bicycle Barriers webmap identifies CSAH 88 (New Brighton Blvd) as an Expressway Barrier. A portion of CSAH 153 (Kenzie Ter) falls within the Expressway Barrier Crossing Area for the CSAH 88 (New Brighton Blvd) barrier. The proposed project will provide parallel multimodal facilities and an all ages and abilities bicycle connection approximately 500' to the north of CSAH 88 (New Brighton Blvd)

For people driving, a smooth pavement surface, turn lanes at key intersections, and green space will provide a more pleasant user experience. The use of medians and travel lanes that are right-sized for the surrounding environment will provide visual cues to drivers to manage speeds, which will benefit people of all modes traveling along and across CSAH 153 (Lowry Ave/Kenzie Ter).

(Limit 2,800 characters; approximately 400 words)

Transit Projects Not Requiring Construction

If the applicant is completing a transit application that is operations only, check the box and do not complete the remainder of the form. These projects will receive full points for the Risk Assessment.

Park-and-Ride and other transit construction projects require completion of the Risk Assessment below.

Check Here if Your Transit Project Does Not Require Construction

Measure A: Risk Assessment - Construction Projects

1. Public Involvement (20 Percent of Points)

Projects that have been through a public process with residents and other interested public entities are more likely than others to be successful. The project applicant must indicate that events and/or targeted outreach (e.g., surveys and other web-based input) were held to help identify the transportation problem, how the potential solution was selected instead of other options, and the public involvement completed to date on the project. The focus of this section is on the opportunity for public input as opposed to the quality of input. NOTE: A written response is required and failure to respond will result in zero points.

Multiple types of targeted outreach efforts (such as meetings or online/mail outreach) specific to this project with the general public and partner agencies have been used to help identify the project need.

Yes

100%

At least one meeting specific to this project with the general public has been used to help identify the project need.

At least online/mail outreach effort specific to this project with the general public has been used to help identify the project need.

50%

No meeting or outreach specific to this project was conducted, but the project was identified through meetings and/or outreach related to a larger planning effort.

25%

No outreach has led to the selection of this project.

0%

Describe the type(s) of outreach selected for this project (i.e., online or in-person meetings, surveys, demonstration projects), the method(s) used to announce outreach opportunities, and how many people participated. Include any public website links to outreach opportunities.

Response:

The CSAH 153 (Lowry Ave NE/Kenzie Ter) Phase 3 Reconstruction Project has been informed thorough previous public engagement for reconstruction activities to the west as well as by the 2015 Lowry Ave NE Corridor Plan and Implementation Framework (hennepin.us/-

/media/hennepinus/residents/transportation/lowry-ave-community-works/lowry-avenue-northeast-final-plan-10-15.pdf). Public engagement for the first phase of reconstruction included the use of a stakeholder advisory committee, in-person events, direct business outreach, virtual events and a public workshop. Events attended included farmers markets, open streets, and direct work with neighborhood association meetings. Outreach occurred in two phases from 2021 to 2022. Materials were presented in both English and Spanish to ensure inclusivity throughout the engagement process.

The 2015 Lowry Ave NE Corridor and Implementation Framework utilized three committees (a steering team, a community advisory team, and a technical advisory team) including representatives of neighborhood organization, business associations, local institutions and property owners. As part of the planning process, staff from Hennepin County also worked with local high school students and Level 2 English language Learners across several different languages to solicit feedback from a BIPOC residents and stakeholders. Key themes identified through public engagement included poor pedestrian conditions, a lack of streetscaping and inadequate stormwater management, among other concerns, which helped inform the potential design for the CSAH 153 (Lowry Ave NE/Kenzie Terr) Phase 3 Reconstruction Project.

Future engagement will be coordinated with the City of Minneapolis, the City of St. Anthony as well as other key stakeholders such as Metro Transit and the Minneapolis Park and Recreation Board to identify appropriate strategies to facilitate community input, particularly from BIPOC residents, youth, older adults and other disadvantaged communities. Staff from communications will be included in the project team to ensure the use of best practices. Historically, strategies to engage disadvantaged populations include, but are not limited to, working directly with community groups and neighborhood organizations, focus groups, technical advisory committees, virtual and in-person events, surveys, and physical signage throughout the project area.

(Limit 2,800 characters; approximately 400 words)

2. Layout (25 Percent of Points)

Layout includes proposed geometrics and existing and proposed right-of-way boundaries. A basic layout should include a base map (north arrow, scale; legend;* city and/or county limits; existing ROW, labeled; existing signals;* and bridge numbers*) and design data (proposed alignments; bike and/or roadway lane widths; shoulder width;* proposed signals;* and proposed ROW). An aerial photograph with a line showing the project?s termini does not suffice and will be awarded zero points. *If applicable

Layout approved by the applicant and all impacted jurisdictions (i.e., cities/counties/MnDOT. If a MnDOT trunk highway is impacted, approval by MnDOT must have occurred to receive full points. A PDF of the layout must be attached along with letters from each jurisdiction to receive points.

100%

A layout does not apply (signal replacement/signal timing, stand-alone streetscaping, minor intersection improvements). Applicants that are not certain whether a layout is required should contact Colleen Brown at MnDOT Metro State Aid? colleen.brown@state.mn.us.

100%

For projects where MnDOT trunk highways are impacted and a MnDOT Staff Approved layout is required. Layout approved by the applicant and all impacted local jurisdictions (i.e., cities/counties), and layout review and approval by MnDOT is pending. A PDF of the layout must be attached along with letters from each jurisdiction to receive points.

| Layout completed but not approved by all jurisdictions. A PDF of the layout must be attached to receive points. | Yes |

Synchro Report for proposed conditions (PM Peak) CSAH 153 & Autumn Woods Apartment Access

County staff are proposing to remove the existing traffic signal at the CSAH 153 and the Autumn Woods Apartment Access (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions.

CSAH 153 (Lowry Ave/Kenzie Ter) Phase 3 Reconstruction Project

| Synchro Report for proposed conditions (PM Peak) CSAH 153 & Hayes St |
|--|
| |
| County staff are proposing to remove the existing traffic signal at the CSAF 153 and Hayes St intersection (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions. |
| |
| |
| |

Synchro Report for proposed conditions (PM Peak) CSAH 153 & Autumn Woods Apartment Access

County staff are proposing to remove the existing traffic signal at the CSAH 153 and the Autumn Woods Apartment Access (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions.

CSAH 153 (Lowry Ave/Kenzie Ter) Phase 3 Reconstruction Project

| Synchro Report for proposed conditions (PM Peak) CSAH 153 & Hayes St |
|--|
| |
| County staff are proposing to remove the existing traffic signal at the CSAH 153 and Hayes St intersection (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions. |

Synchro Report for proposed conditions (PM Peak) CSAH 153 & Autumn Woods Apartment Access

County staff are proposing to remove the existing traffic signal at the CSAH 153 and the Autumn Woods Apartment Access (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions.

Synchro Report for proposed conditions (PM Peak) CSAH 153 & Autumn Woods Apartment Access

County staff are proposing to remove the existing traffic signal at the CSAH 153 and the Autumn Woods Apartment Access (pending further evaluation and local approval). Therefore, there are no signal timing plans for the proposed conditions.

Project Summary

Reconstruct Lowry Avenue NE /Kenzie Terrace (CSAH 153) from 150' East of Johnson Street NE to 200' West of St. Anthony Boulevard in the cities of Minneapolis and St. Anthony.

Roadway History

The existing roadway (last reconstructed in 1968) is nearing the end of its useful life and warrants replacement. Routine maintenance activities are no longer cost effective in preserving assets. The west segment, from Johnson Street NE to Stinson Parkway, is especially showing signs of advanced deterioration as the curb has settled; diminishing in its ability to collect and retain water. Although sidewalks are provided along both sides, they do not provide a positive user experience as the sidewalk facilities are located immediately adjacent to the roadway. In addition, the sidewalk facilities along the west side of Lowry Avenue NE (CSAH 153) include a number of obstructions (such as utility poles, fire hydrants, and signal poles) within the walking path. Many pedestrian ramps do not meet current ADA standards, posing challenges for people with limited mobility. Also, minimal pedestrian crossing enhancements (such as curb extensions, raised medians, and beacons) exist along the corridor. Lastly, there are no dedicated facilities for people biking.

Project Description and Benefits

The proposed project will include new pavement, curb, storm water utilities, sidewalk, ADA accommodations, and traffic signals. In recognition of the surrounding land uses, it's anticipated that different typical sections will be selected for the west segment (extending from Johnson Street NE to Stinson Parkway) versus the east segment (extending from Stinson Parkway to St. Anthony Parkway). Further investigation will take place during design to determine the feasibility of dedicated accommodations for people biking; building on engagement efforts completed along Lowry Avenue NE (CSAH 153) to the west. In addition, the existing Hayes Street NE and Autumn Woods Driveway will be evaluated during project development to determine the recommended intersection control device. Lastly, it is anticipated that proven traffic calming strategies (such as medians, curb extensions, and beacons) will be introduced to improve the crossing experience and manage vehicle speeds.

Project Risks & Uncertainities

Additional coordination needed with Metro Transit as Route 32 is included as a planned Arterial Bus Rapid Transit (ABRT) service as part of Network Next.

Funding Notes

Eligible for federal funding through the Metropolitan Council's Regional Solicitation given the function classification of A-Minor Augmentor.

Attachment 02 | Project Location Map

Disclaimer: This map (i) is furnished "AS IS" with no representation as to completeness or accuracy; (ii) is furnished with no warranty of any kind; and (iii) is not suitable for legal, engineering or surveying purposes. Hennepin County shall not be liable for any damage, injury or loss resulting from this map.

Attachment 03 | Existing Roadway Condition Photos

The intersection of Lowry Ave NE (CSAH 153) and Johnson St NE is pictured above. Ramps along the corridor are not ADA compliant. Insufficient storm water management along the corridor leads to flooding obstructions at intersections.

Roadway infrastructure is beyond its useful life and requires replacement.

Hennepin County Public Works 1600 Prairie Drive, Medina, MN 55340 612-596-0300 | hennepin.us

Sidewalks and pavement are aging and require replacement. There are many obstructions along the corridor for people walking as shown above at Kenzie Terr (CSAH 153) and Stinson Pkwy.

Aging sidewalk infrastructure making it difficult for people to walk and roll.

CSAH 153 (Lowry Ave NE/Kenzie Terr) Phase 3 Reconstruction Project HENNEPIN COUNTY Attachment 05 | Potential Concept

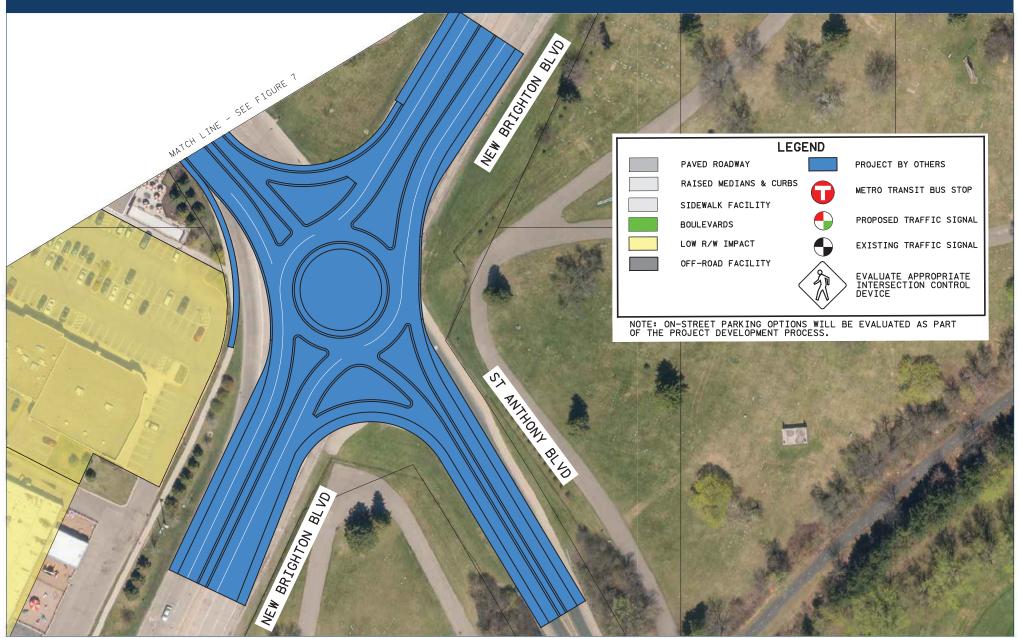

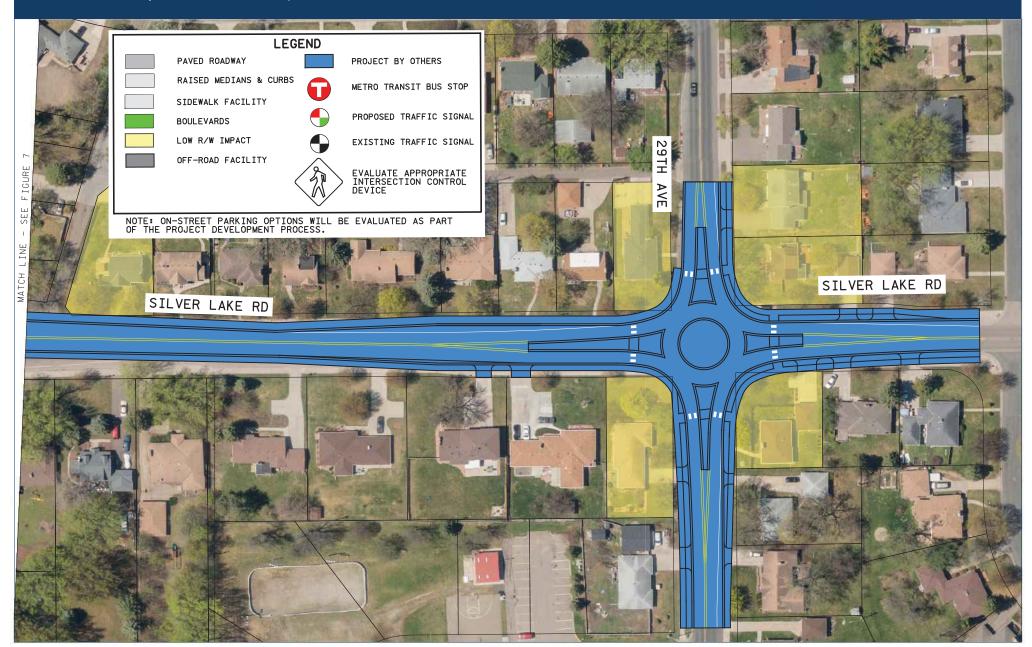

Attachment 06 | Hennepin County 2024-2027 Transportation CIP

Project Name: 2141000 CSAH 153 - Reconst Lowry/Kenzie Ter fr Johnson to St Anthony

Major Program: Public Works

Department: Transportation Roads & Bridges

Funding Start: 2025 Funding Completion: 2028

Summary:

Reconstruct Lowry Avenue NE (CSAH 153) from Johnson Street NE to St. Anthony Boulevard (CSAH 136) in the Cities of Minneapolis and St. Anthony. Note that the local name changes from Lowry Avenue NE to Kenzie Terrace NE at Stinson Parkway which represents the municipal boundary.

Purpose & Description:

The existing roadway (last reconstructed in 1968) is nearing the end of its useful life and warrants replacement. Routine maintenance activities are no longer cost effective in preserving assets. The roadway segment extending from Johnson Street NE to Stinson Parkway was originally constructed as concrete pavement that has since received bituminous overlays on its concrete surface. These conditions are undesirable as they result in premature cracking in the pavement surface at pre-existing joints. West of Stinson Parkway, the roadway consists of a 2-lane undivided section with off-street parking provided along both sides of the roadway, and east of Stinson Parkway, the roadway consists of a 4-lane divided roadway with turn lanes. Throughout the corridor, the sidewalk facilities are located immediately adjacent to the roadway, include various obstructions within the walking route, and many pedestrian ramps do not satisfy current ADA design standards.

Housing and Economic Development completed the Lowry Avenue NE Framework Plan in 2015 that identified corridor needs in terms of mobility and development potential as well as opportunities to create a more pedestrian friendly environment. This project represents Phase 3 (of 3) for implementing improvements along Lowry Avenue NE (CSAH 153) and is directly related to Capital Project 2140900 and Capital Project 2140800.

The proposed project is anticipated to include new pavement, curb, storm water utilities, sidewalk facilities, ADA accommodations, and traffic signals. It is anticipated that a boulevard will be constructed to provide space for streetscaping elements, separate people walking from people driving, and provide space for signage and snow storage. Complete and Green Streets strategies will especially be explored for the segment extending from Stinson Parkway to St. Anthony Parkway to promote adequate stormwater management. The proposed project also provides an opportunity to coordinate with the Minneapolis Park and Recreation Board to close a nearby trail gap within the Grand Rounds Regional Trail network.

Completion 2029

Project's Effect on the Operating Budget:

Additional planning and design work is required to determine the anticipated impact to Transportation Department staff or annual operating costs.

Project's Effect on County Priorities:

This project will reduce disparities in the transportation domain and vehicle miles traveled per capita by creating new safe, accessible connections for all modes. This is especially important as the project is located in an area that includes relatively high percentages of people with limited mobility.

Changes from Prior CIP:

This is a new project request by Transportation Project Delivery for the 2024-2028
 Transportation CIP to reconstruct Lowry Avenue NE/Kenzie Terrace (CSAH 153)
 from Johnson Street NE to St. Anthony Boulevard (CSAH 136) in the Cities of
 Minneapolis and St. Anthony.

Board Resolutions / Supplemental Information:

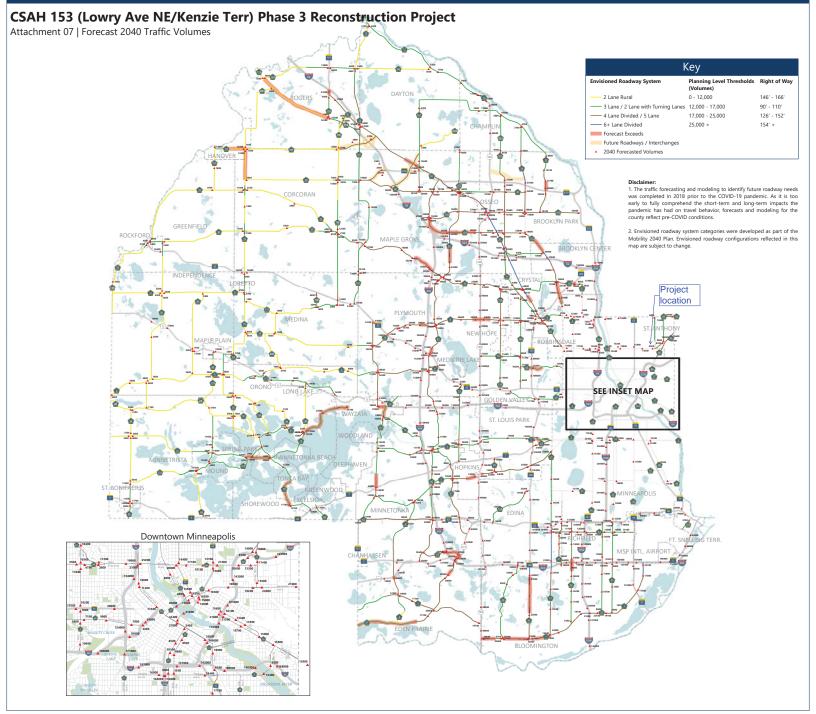

Project Budget Notes:

• This project is Phase 3 (of 3) of capital improvements recommended for the Lowry Avenue NE corridor and is related to Capital Projects 2140900 and 2140800.

^{*}Before-After symbols depict the following:

In Table 22, the before-after crash trends are represented by the four statistics:

- Frequency of all crashes at a site,
- Crash rate,
- Frequency of severe crashes at a site, and
- Frequency of single-vehicle crashes.

Ideally, a reduction in all four trend statistics would be observed, clearly demonstrating enhanced safety at a site; however, in many cases, an increase occurred for one beforeafter crash trend statistic while others remained constant or decreased. For all candidate improvement projects, a designer seeks to reduce the number of severe crashes at a site. Severe crashes, for the purposes of the values shown in the case study tables, generally include incapacitating injuries or fatalities.

Only three of the case study sites ex Terr) for segments east of Stinson Pwky than one additional severe crash planticipated to be introduced within both

little change to a reduction in severe crashes.

5% was used along CSAH 153 (Kenzie in recognition of streetscaping case study sites included sidewalk ithe raised medians and boulevard areas. strips, but several similar improvement projects resulted in

Since the focus of this research effort is roadside crashes, and these frequently are single-vehicle crashes, an increase in these kinds of crashes may be of concern. Single-vehicle crashes increased by more than one crash at eight of the sites. In general, these sites included pedestrian enhancement improvements; however, as was the case with the sites of severe crashes discussed above, there were many pedestrian enhancement projects that resulted in reduced single-vehicle crashes.

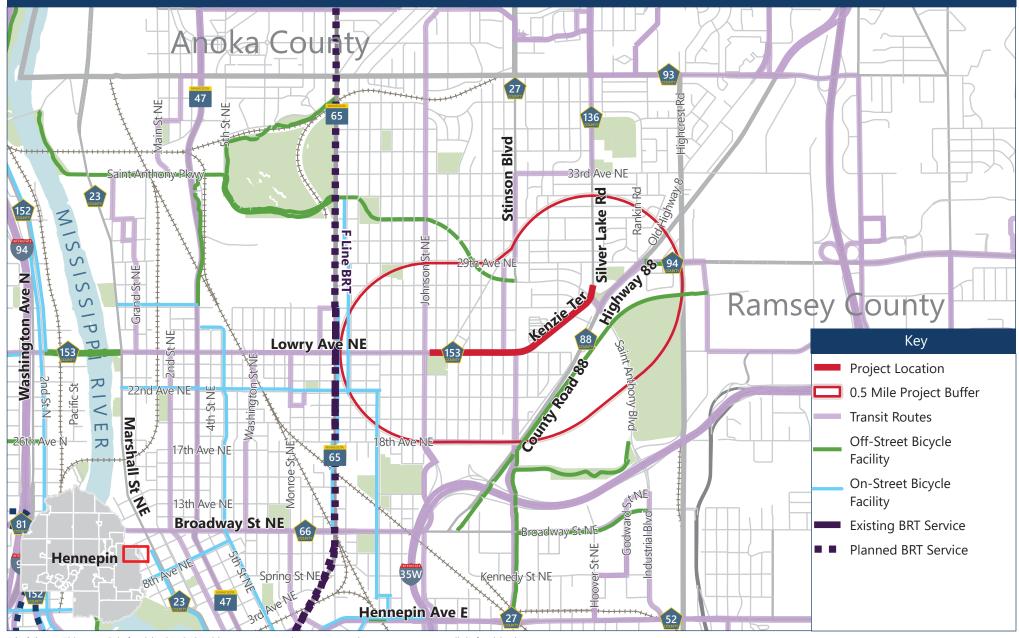

Since inspection of the individual before-after crash trends provides confounding results, a more effective approach may be to examine all four before-after crash trends collectively.

^{↑ =} Crash frequencies increased by more than one crash per year; crash rates increased by more than 5 percent.

^{↓ ≡} Crash frequencies decreased by more than one crash per year; crash rates decreased by more than 5 percent

^{⇔ ≡} Crash frequencies for the "After" condition were within one crash per year of the "Before" condition; crash rates for the "After" condition were within 5 percent of the "Before" condition crash rates. A conservative crash reduction value of

HENNEPIN COUNTY

MINNESOTA

November 9, 2023

Nathan Koster Transportation Planning Manager City of Minneapolis – Department of Public Works 301 4th Ave S – Suite 785N Minneapolis, MN 55415

Re: Support for 2024 Regional Solicitation Application

CSAH 153 (Lowry Ave/Kenzie Ter) from Johnson St NE to St. Anthony Blvd

Dear Mr. Koster:

As part of the Metropolitan Council's 2024 Regional Solicitation, Hennepin County is submitting an application to seek federal funding for a reconstruction project along CSAH 153 (Lowry Ave/Kenzie Ter) from Johnson St NE to St. Anthony Blvd in the Cities of Minneapolis and St. Anthony. Federal funding through this solicitation is available for program years 2028 and 2029.

This project will involve the reconstruction of the existing roadway and will include, but not limited to, the following elements: new pavement, curb, stormwater structures, traffic signals, sidewalk facilities, and ADA accommodations. The preferred typical section will be determined as part of the project development process based on characteristics of the project area, values of the community, as well as the infrastructure, safety, and user needs. It is anticipated that these proposed improvements will provide additional accessibility, safety, and mobility for people walking, taking transit, biking, and driving, thereby enhancing the livability and quality of life for Minneapolis and Hennepin County residents.

We would appreciate a letter of support or resolution from the City of Minneapolis for this application and project, acknowledging that the city is aware of this project and understands that the city will likely be required to cost participate in this project as outlined in the county's Cost Participation and Maintenance policies. Specific details regarding cost participation and maintenance responsibilities are anticipated to be determined during the design process as project development is advanced.

Attachment 14 | Notice of Application Submittal to City of Minneapolis

If you agree to support this proposed project, please send a PDF letter via email addressed to:

Carla Stueve, P.E.
Director and County Highway Engineer
Hennepin County Transportation Project Delivery
1600 Prairie Drive
Medina, MN 55340

You may email the electronic version of the letter to me at Emily.Buell@hennepin.us. I have attached a letter template that you may use or modify as you see fit.

Hennepin County appreciates the opportunity to partner with the City of Minneapolis on this important transportation improvement project. Given an application deadline of December 15, 2023, we would appreciate your support letter by December 1, 2023. If you have any questions, please contact me at (612) 543-1963 or at Emily.Buell@hennepin.us.

Sincerely,

Emily Buell

Attachment 15 | City of St. Anthony Support Letter

November 15, 2023

Carla Stueve, P.E Director and County Highway Engineer Hennepin County Transportation Project Delivery 1600 Prairie Drive Medina, MN 55340

Dear Ms. Stueve:

The City of St. Anthony hereby expresses its support for Hennepin County's Regional Solicitation federal funding application for the proposed reconstruction project along CSAH 153 (Lowry Ave/Kenzie Ter) from Johnson St NE to St. Anthony Blvd in the Cities of Minneapolis and St. Anthony.

This project will involve the reconstruction of the existing roadway and will include, but not limited to, the following elements: new pavement, curb, stormwater structures, traffic signals, sidewalk facilities, and ADA accommodations. The preferred typical section will be determined as part of the project development process based on characteristics of the project area, values of the community, as well as the infrastructure, safety, and user needs. It is anticipated that these proposed improvements will provide additional accessibility, safety, and mobility for people walking, taking transit, biking, and driving, thereby enhancing the livability and quality of life for Minneapolis, St. Anthony, and Hennepin County residents.

The City of St. Anthony acknowledges that the city will likely be required to cost participate in this project as outlined in the county's cost participation policy. Specific details regarding cost participation and maintenance responsibilities are anticipated to be determined during the design process as project development is advanced.

Thank-you for making us aware of this application and project, and the opportunity to provide support. The City of St. Anthony looks forward to working with you on this project.

RE: Letter of Support

Regional Solicitation for Reconstruction Project at CSAH 153

Dear Ms. Stueve:

The Minneapolis Park and Recreation Board (MPRB) hereby expresses its support for Hennepin County's Regional Solicitation federal funding application for the proposed reconstruction project along CSAH 153 (Lowry Ave/Kenzie Ter) from Johnson St NE to St. Anthony Blvd in the cities of Minneapolis and St. Anthony.

This project will involve the reconstruction of the existing roadway and will include, but not be limited to, the following elements: new pavement, curb, stormwater structures, traffic signals, sidewalk facilities, and ADA accommodations. The MPRB understands the preferred typical section will be determined as part of the project development process based on characteristics of the project area, values of the community, as well as infrastructure, safety, and user needs. It is understood that the proposed improvements may impact parkland under the MPRB's jurisdiction but it is anticipated that the improvements will provide additional accessibility, safety, and mobility for people walking, taking transit, biking, and driving. The MPRB believes the improvements will enhance accessibility to MPRB parklands for park and trail users on Stinson Parkway, and improve the livability and quality of life for Minneapolis, St. Anthony, and Hennepin County residents

The Minneapolis Park and Recreation Board acknowledges that the county will likely request cost participation from the park board in this project as outlined in the county's cost participation policy. Specific details regarding cost participation and maintenance responsibilities are anticipated to be determined during the design process as project development is advanced.

Thank you for making us aware of this application and project and the opportunity to offer support for its advancement.

Sincerely,

Michael Schroeder, Assistant Superintendent for Planning Services

Attachment 17 | Metro Transit Support Letter

December 1, 2023

Carla Stueve, P.E.
Director and County Highway Engineer
Hennepin County Transportation Project Delivery
1600 Prairie Drive
Medina. MN 55340

Dear Ms. Stueve:

Metro Transit is supportive of Hennepin County's Regional Solicitation federal funding application for the proposed reconstruction project along CSAH 153 (Lowry Avenue/Kenzie Terrace) from Johnson St NE to St. Anthony Blvd in Minneapolis and St. Anthony. This segment of Lowry Avenue/Kenzie Terrace is served today by Route 32, with seven existing bus stops within the project area. Metro Transit has also identified the Lowry Avenue corridor as a priority for arterial BRT expansion prior to 2040.

This project will involve the reconstruction of the existing roadway and will include, but is not limited to, the following elements: new pavement, curb, stormwater structures, traffic signals, sidewalk facilities, and ADA accommodations. The preferred typical section will be determined as part of the project development process based on characteristics of the project area, values of the community, as well as infrastructure, safety, and user needs. The proposed project will provide key first- and last-mile connections to current and future transit service in the corridor. It is anticipated that the project will improve accessibility, safety, and mobility for people walking, riding transit, biking, and driving.

We appreciate that the County intends to engage Metro Transit staff early and often during project development to discuss current and future transit needs along this street. We look forward to collaborating with the County in the project development process to accommodate transit needs.

Thank you for making us aware of this application and the opportunity to provide support.

Sincerely,

Lesley Kandaras esley Kandaras (Nov 30, 2023 18:44 CST

Attachment 18 | Hennepin County and City of Minneapolis Maintenance Agreement

Contract No. ______ Maintenance Agreement City of Minneapolis County of Hennepin

COUNTY OF HENNEPIN/CITY OF MINNEAPOLIS ROAD MAINTENANCE AGREEMENT

This Agreement ("Agreement") is made between the **County of Hennepin**, a body politic and corporate under the laws of the State of Minnesota, hereinafter referred to as the "County", and the **City of Minneapolis**, a Minnesota home-rule charter city under the laws of the State of Minnesota, hereinafter referred to as the "City". The County and the City collectively are referred to as the "Parties".

Recitals

The following Recitals are incorporated into this Agreement.

- 1. There exists County State Aid Highways (CSAHs) inside of and bordering the corporate limits of the City as shown in the attached Exhibit "A", "B", "C", "D" and "H", and traffic signal systems owned by the County within the said limits as shown in the attached Exhibit "E" and "I".
- 2. The geographical location of the CSAHs and traffic signal systems listed in Exhibits above are such that the City can provide routine maintenance services in a more timely and cost effective manner.
- 3. To ensure proper maintenance, repair and coordination of the County's infrastructure within and bordering the City's corporate limits, both Parties periodically enter into an agreement called County of Hennepin/City of Minneapolis Road Maintenance Agreement (the "Agreement"), providing for the maintenance of County-owned roadways, bridges, storm sewers and traffic control devices within the corporate limits of the City.
- 4. To effectively coordinate all work, the County and City staffs will meet quarterly (or as needed) to discuss general maintenance items, and leadership will meet as needed to discuss any amendment to the Agreement.
- 5. The work will be carried out by the Parties under the provisions of Minnesota Statutes, Section 162.17.

Agreement

NOW, THEREFORE, the Parties agree as follows:

- 1. Term of Agreement, Survival of Terms, and Exhibits.
 - **1.1. Effective Date.** This Agreement is effective as of the date of the final signature, and retroactively in effect from January 01, 2021.
 - **1.2.** Expiration Date. This Agreement will expire on December 31, 2023.
 - **1.3. Survival of Terms.** Provisions that by their nature are intended to survive the term, cancellation or termination of this Agreement do survive such term, cancellation or termination. Such provisions include but are not limited to: Maintenance Responsibilities, Records/Audits, Indemnification, Insurance, Worker Compensation Claims, Cancellation, Termination, and Minnesota Laws Govern.
 - **1.4. Exhibits** are attached and incorporated into this Agreement.

1.4.1. Exhibit "A".

- COUNTY STATE AID HIGHWAYS IN MINNEAPOLIS Surface Maintenance by City of Minneapolis Forces
- COUNTY STATE AID HIGHWAYS IN MINNEAPOLIS
 Towing, Snow and Ice Control by City of Minneapolis Forces (Including

by City of Minneapolis) (Tagging and Towing Services by City of Minneapolis)

1.4.5. Exhibit "E".

- COUNTY STATE AID HIGHWAYS IN MINNEAPOLIS Traffic Signals
- 1.4.6. Exhibit "F". Schedule of Costs
- 1.4.7. Exhibit "G". Lane Mile Table
- **1.4.8. Exhibit "H".** Selected Sample of Urban County State Aid Highways
- **1.4.9. Exhibit "I".** Selected Sample of Traffic Control Signals
- 1.4.10. Exhibit "J". Lowry Bridge Electrical Services

2. The City's Maintenance Responsibilities.

2.1. Surface Maintenance.

2.1.1. The City's Core Area Surface Maintenance. The City shall maintain the City's core area portion of the County State Aid Highways defined as the area south of CSAH 66 (Broadway Avenue), east and north of I-94, and west of I-35W and southwest of the Mississippi River, marked as Exhibit "A", so as to keep the same reasonably smooth and in reasonably good repair for the passage of vehicular traffic and reasonably free of all obstructions and impediments to traffic. This maintenance shall include such preventative maintenance services as may be reasonably required to preserve the roadway in reasonably good condition, including but not limited to proper and timely crack and joint sealing and surface patching.

2.2. Snow and Ice Control.

- **2.2.1.** The City's Core Area Snow and Ice Control. The City shall keep the aforesaid portions of County State Aid Highways marked as Exhibit "A", reasonably free and clear from snow, ice and debris and undertake proper snow and ice control operations when necessary. The City shall maintain the through traffic lanes to their full width and ensure that such lanes are reasonably free and clear from snow and ice within a reasonable period of time following each winter storm.
- **2.2.2.** Raised Medians/Pedestrian Refuges. The City shall keep raised median pedestrian openings and pedestrian refuges reasonably free and clear from snow and ice in accordance with City practices following each winter storm.
- **2.2.3. Bicycle Facilities.** The City shall keep protected bicycle facilities with vertical separation including; delineators, raised curb, concrete barrier, parking, etc., on County State Aid Highways marked as Exhibit "B", reasonably free and clear

Attachment 18 | Hennepin County and City of Minneapolis Maintenance Agreement

from snow, ice and debris in accordance with City practices.

2.2.4. Unlimited Access to Fueling Station. The City shall provide County personnel and vehicles unlimited access to an automated fueling station 24 hours a day. To facilitate fueling station access:

The County will:

- Provide employees' names and associated County driver permit numbers,
- Provide County unit numbers, unit descriptions, VINs, and tank capacities assigned to each City provided fueling fob,
- Provide the unit numbers that are taken out of service when no longer in use,
- Provide the employees' names and driver permit numbers of employees separated from employment and/or who no longer need to fuel County units,
- Pay for fuel usage within 30 calendar days of being invoiced by the City, and
- Provide a point of contact to resolve issues related to fueling and billing.

The City will:

- Provide a fueling PIN for each County employee with fueling station access,
- Provide fueling fobs and associated fob number,
- Add County employees to City's fueling station database,
- Add County vehicle information assigned to each fob to City's fueling station database,
- Modify unit status within fuel management system,
- Disable fuel access for users who no longer require the fuel privileges,
- Provide a monthly invoice of County fuel use, and
- Provide a point of contact to resolve issues related to fueling and billing.
- **2.3. Sweeping.** Maintain the portions of the County State Aid Highways marked as Exhibit "B" by keeping them reasonably free of all obstructions and impediments. This maintenance shall include street sweeping, rubbish removal, and cleaning in accordance with City practices and trimming of trees within County State Aid Highway right of way.
- **2.4. Drainage.** The City-owned drainage trunk line storm sewers under County roads listed on Exhibit "B" shall be maintained by the City in accordance with City practices.
 - **2.4.1** Manhole and Catch Basin Maintenance as Agreed to by County. If, in the context of performing maintenance on the City's drainage system, the City observes a need for corrective maintenance on nearby County-owned manholes or catch basins, the City will notify the County Road Operations Manager via Hennepin County Dispatch 612-596-0299. If it is agreed to be mutually beneficial, the County, subject to limitations and restrictions provided in Subsection 4.1, may facilitate or cause the City to perform the agreed upon corrective maintenance. The
