

# SEWER WORK IN YOUR AREA

## MAY 13 OPEN HOUSE

Attend an open house to learn more about the project and traffic impacts:

Monday, May 13  
5-7 p.m.  
Mound City Hall

### PROJECT LOCATION

The Metropolitan Council is replacing aging sanitary sewer pipes in the cities of Mound and Spring Park beginning in June 2024. This work will occur along Shoreline Drive. Construction is expected to begin in June 2024 and is anticipated to be completed by April 2025, with final restoration in summer 2025.

Metropolitan Council  
Environmental Services  
390 Robert Street North  
Saint Paul, MN 55101

# MOUND SANITARY SEWER REPLACEMENT PROJECT

## PROJECT NEEDS

The Mound sanitary sewer pipes connect community lines serving local homes and businesses to the regional wastewater system. A routine pipe inspection showed these pipes are in very poor condition and in need of immediate repair. Replacing them will improve the wastewater system and protect against breaks or leaks that could impact public and environmental health near Lake Minnetonka. It will also ensure ongoing service, provide capacity for future growth and increase reliability.

## CONSTRUCTION LOCATIONS AND ACTIVITIES

Work will focus on two main sites:

- The Shoreline Drive and Auditors Road intersection. This section of pipe is sagging due to poor soil. A new pipe will be installed and the surrounding soil will be leveled and strengthened to prevent future issues.
- Shoreline Drive between Chateau Lane and West Arm Road. This entire section of force main will be replaced due to poor pipe conditions.

## WHAT TO EXPECT

People who live or work near the project area may experience traffic disruptions, potential odors and noise.

- **Lane closures on Shoreline Drive** will be in place throughout construction. One lane will remain open in each direction.
- A **full road closure and detour** will be needed for several weeks during the pipe replacement near Auditors Road.
- A temporary **closure and detour of the Dakota Rail Regional Trail** may be necessary during portions of construction around the Seton Channel crossing.
- Crews will install **temporary conveyance pipes** to move wastewater around the construction area. They will be primarily located above ground but will be buried under driveways and road crossings to maintain access. Short-term closures will occur to bury these pipes.
- Additionally, crews may need to excavate around manholes to install equipment for pipe removal and to repair the manholes.

Temporary wastewater conveyance system.

## MAY 13 OPEN HOUSE

Join the Met Council for an in-person public meeting:

Monday, May 13 | 5-7 p.m.

Mound City Hall, 2415 Wilshire Boulevard

This open house-style meeting will include more information on the project, including potential disruptions, detours and closures.

The project team will also share project timing and processes, such as aboveground temporary wastewater conveyance.

The project team will give a short presentation at 6 p.m. to explain the project and anticipated impacts. Staff will be available to discuss questions and concerns before and after the presentation.

As the operator of the metro-area wastewater collection and treatment system, the Metropolitan Council is committed to supporting clean water and a healthy environment. Maintaining regional sewers is an important part of doing so.
