

The map, left, illustrates the share of households in each community that experience moderate or severe housing cost burden. This means they devote at least 30% (moderate) or 50% (severe) of their income for housing. For example, more than 40% of households in St. Paul report a significant housing cost burden. The map, right, illustrates the share of commuters from each community that reports traveling 30 minutes or more to work. Together, these maps illustrate the phenomenon that metro area residents may be “driving to affordability” or moving further from their workplaces to find more affordable housing.
